Fordhook Farms and Experimental Gardens

At Beautiful Doylestown, Pa.

"Fordhook" long ago became a well-known and well-loved name among gardeners all over the world, for many of the famous Burpee introductions are named for the great Fordhook Farms. Extending around and right into beautiful Doylestown are the 800 acres of fertile farms and gardens which make up Fordhook. Here is produced the seed of many special strains of vegetables and flowers under the supervision of a large staff of experts.

Here also are the famous Fordhook proving grounds, the largest in the world, where all Burpee Seeds are thoroughly tested so that they may be backed by the Burpee guarantee. After a visit to Fordhook, Luther Burbank, the famous plant wizard, wrote: "Your Fordhook Trial Grounds were the best of all my eastern object lessons. I had no idea of their extent and value not only to yourself but to your customers, and eventually to everyone who cultivates the soil."

The Burpee Flower Gardens at Fordhook always offer something to interest and delight gardeners. Visitors are very welcome at all times.

Floradale Farms

At Lompoc, California

Where the Big Sweet Peas Grow

Yes, and the big Zinnias, Petunias, Snapdragons, Asters, and all other flowers too. Here, under ideal conditions of soil and climate, Burpee produces the wonderful seeds that are famous as the best seeds that grow. Burpee's Floradale Farms comprise hundreds of acres in the fertile Lompoc Valley, about 40 miles north of Santa Barbara. The rich, deep soil, the moderate climate, and the heavy night dews all combine to give the seeds grown here exceptional vigor, vitality, and hardiness, which assure sturdy growth and successful blooming wherever they are grown.

Sweet Peas have always been one of the notable specialties at Floradale Farms. There are hundreds of acres of them and when they are in bloom they form one of the wonder-sights of America. Then, of course, there are all the other flowers for which Burpee is famous—and many vegetables as well which develop best in this climate. Like Fordhook, Floradale has also given its name to a large number of outstanding Burpee introductions. Its vast expanse of gorgeously colorful gardens has given Floradale a world-wide reputation as "The California Home of Flowers." It is one of the magnets of Western America, drawing thousands of visitors every year.

Ever since the introduction of the Double Nasturtium Golden Gleam, gardeners everywhere have been eagerly awaiting more colors in Double Nasturtiums. NOW BURPEE HAS CREATED THEM and Burpee customers will be the first to enjoy the thrill of growing them.

Giant Sweet-Scented Flowers 2¾ to 3 inches across

All the lovely, soft, and best brilliant colors, and, who knows, perhaps colors never before seen in Nasturtiums! As these new Double Nasturtiums are hybrids, there may be an occasional single or semi-double flower.

The large DOUBLE flowers, especially those of a soft primrose color, are exquisitely sweet scented. Colors range from a pearly lemon shade to brilliant scarlet. The orange and scarlet flowers grow to a size never before seen in these colors.

Burpee's Double Hybrids in gorgeous colors are produced on long stiff stems. They are excellent for cutting as well as for garden decoration.

To create Burpee's new Double Hybrid Nasturtiums nearly 40,000 crosses were made by hand pollination on our Floradale Farms in California.

No Expense has been Spared to Produce the Double Hybrids

This winter we are devoting all the large greenhouses on our Fordhook Farms in Pennsylvania to the raising of seed. To save time, seed for planting in the greenhouses was shipped from California by airplane. We have gone to a great expense to have good, strong seeds of Burpee's Double Hybrids ready to send you by the 15th of May. Order early.

How Will Your Lawn Look This Summer?

A Little Attention Early in the Spring Will Work Wonders

The best time to start your lawn, or to repair it, is during the cool weather of early spring, for that is when grass grows most successfully and gets its strength to withstand the hot, dry weather that comes later. Why not plan now to have the luxurious lawn that will add so much to the beauty of your home? All you need is a rake, a roller, perhaps some top soil, and good seed. Wherever your lawn looks bare or ragged, loosen the soil with a steel rake. Fill in holes with garden soil, rake smooth. Then reseed, rake the seed in very lightly, and roll. Water with a fine spray. You will be wonderfully repaid for very little labor and expense.

Burpee's Famous Lawn Grass Seed

is the best to use. You will find on these pages just the seed you need for general use and for special needs. Sow 1 pound of seed to 200 square feet. 100 to 150 lbs. per acre.

Mary Washington ©

A Most Reliable, Almost Rust-Proof Asparagus

The plants form large clean shoots which are thick and heavy. They are long and straight, with closely folded tips. The color is rich dark green, tinted darker at the tips. It is a heavy yielder and a long-lived producer of exceptionally fine flavor.

Artichoke—
Green Globe

Artichoke 1 Green Globe

This tasty vegetable is gaining favor rapidly. It is a perennial which will persist for many years and continues to give a good crop if grown on well-drained rich soil. It is cultivated for its flower-buds, which are cooked like Asparagus. Besides the meat which is attached to the base of each bud scale, the bottom of the bud has a delicate, pea-like flavor.

Pkt. 15¢; ½ oz. 35¢; oz. 50¢; 4 ozs. \$1.50; ½ lb. \$2.75; lb. \$5.00.

Broccoli Sprouting ©

157 Calabrese This is the Italian Green Sprouting Broccoli which makes a large head of bright green, tender sprouts, which are cooked like Spinach or Brussels Sprouts and have a most delectable flavor, even milder and more palatable than that of Cauliflower. Sow the seed in May and harvest in August. Pkt. 15¢; ½ oz. 25¢; oz. 45¢; 4 ozs. \$1.40; ½ lb. \$2.60; lb. \$4.75.

Broccoli—*Winter Cauliflower*

This type of Broccoli looks just like Cauliflower but it requires a long season and cool weather to grow well. It is grown extensively in the Northwest to ship to eastern markets when home-grown Cauliflower is exhausted.

155 St. Valentine This is a large, white-headed variety of splendid appearance and finest quality. Requires 150 days to come to maturity. Pkt. 10¢; ½ oz. 30¢; oz. 50¢; 4 ozs. \$1.50; ½ lb. \$2.75; lb. \$5.00.

Brussels Sprouts

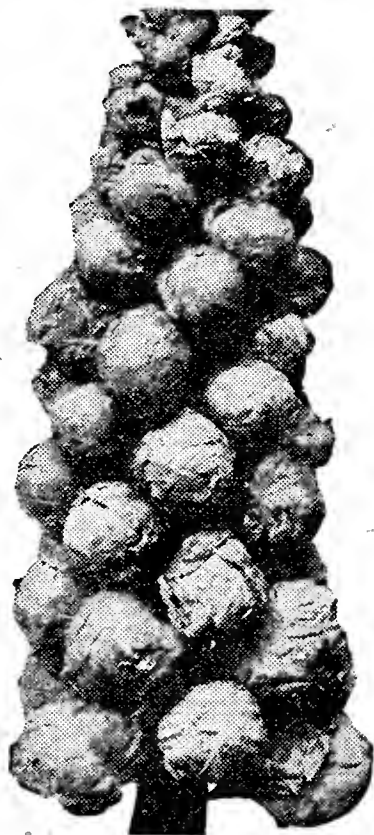

Brussels Sprouts are more delicate in flavor than Cabbage. They are quite hardy and will live throughout the winter in our sections without any protection whatever. The flavor and quality of the sprouts are greatly improved by frost. Sow the seed thinly in drills early in June and transplant to rows 3 to 4 ft. apart in the garden or field. When the sprouts begin to form, remove the lower leaves to force all nourishment sent to the lower stem into the sprouts. One oz. of seed sows 500 ft. of row. Requires 125 days to mature.

162 Burpee's Danish Prize ©

A strong-growing, robust variety that can be depended upon to produce a great quantity of large, solid, round sprouts set thickly on nearly the entire length of the tall stems. The sprouts mature all at about the same time and they are as solid at the base as near the top. Pkt. 15¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; lb. \$2.00.

158 Long Island Improved

A choice variety grown extensively on Long Island for the New York market, where it always brings a good price. Compact plants, 20 in. tall, with solid heavy sprouts measuring 1¼ to 1½ in. in diameter. Pkt. 10¢; oz. 30¢; 4 ozs. 85¢; ½ lb. \$1.25; lb. \$2.25.

Burpee's POLE LIMA Beans

Pole Lima Beans greatly outyield the bush varieties per square foot of garden; but they require poles or other supports, and mature considerably later. Place 6 to 8 seeds edgewise, with the eye downward, around each pole after the nights have become quite warm. Later thin to stand 2 to 3 plants to a pole. One pound of large-seeded varieties for 75 poles.

New Pole Lima Bean 105 Burpee's Best ☉

See Back Cover for Colored Illustration

A vigorous and rapid grower, producing a continuous setting of pods until frost. First pickings are ready almost as early as Fordhook Bush Limas.

A sensational new pole lima that combines the distinctive qualities of Fordhook Bush Lima with an enormous yield surpassing the heavy production of other pole limas. The lustrous green glossy pods contain four or five and sometimes six big thick beans of green color. The pods are straight, five to six inches long, one and one-half inches wide, fully three-quarters of an inch thick, and grow four to eight in a cluster. The beans are exceptionally tender and have the fine nutty flavor of Fordhook.

Burpee's Best is an extremely vigorous, strong-growing plant and a natural climber. It will climb to a height of ten or fifteen feet, with pods

in clusters the entire length of the runners. Easy to pick and to shell—a quick basket filler. Has remarkable long-distance shipping qualities and an attractive appearance and wins a price preference over all other varieties in the lima bean markets.

You will find in this bean a double advantage. On account of the large size and growth of the plants, less seed is required, and a greater yield is returned. Burpee's Best has proved its capacity to produce as much as **eight tons of green beans per acre.**

Burpee's Best is the best pole lima of the Fordhook type for either the market or the home garden. Packet of 20 seeds for 35¢; ¼ lb. \$1.25; ½ lb. \$2.35; 1 lb. \$4.50, postpaid.

98 Burpee's Giant Podded ☉

The largest podded of all Pole Limas. The pods measure from 7 to 8½ in. in length and from 1½ to nearly 2 in. in width, and are produced freely, in clusters of from 4 to 8, until the vines are killed by frost. The green shell beans are extra large, and are invariably of superb flavor. The vines easily attain a height of from 10 to 12 ft. Due to their heavy yield the plants require stout poles or posts as supports. Pkt. 15¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$1.55; 10 lbs. \$2.90, postpaid.

Not prepaid: 15 lbs. \$3.45; 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

95 Burpee's Sunnybrook ☉

The popularity of this fine Pole Lima Bean is due to its extreme earliness and tremendous yield, each spike carrying from 5 to 10 pods of large size. The pods are closely packed with 4, and often 5, large, thick, meaty, light green beans of the finest quality. Pkt. 15¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$1.55; 10 lbs. \$2.90, postpaid. Not prepaid: 15 lbs. \$3.45; 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

*New Pole Lima Bean
Burpee's Best*

Burpee's BUSH

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders, maturing in from 65 to 90 days, according to the variety. Plant in a warm, well-drained, sandy loam.

65 Burpee's Fordhook Bush Lima

The Most Popular of All Bush Lima Beans

A Burpee introduction that vies with Burpee's Improved Bush Lima for first place in quality and popularity. Burpee's Fordhook Bush Lima is in a class by itself. It is a bush type of the popular "Potato" Lima. The pods are borne in "clusters" of from 4 to 8 each. The individual pods are 4 to 5½ in. long, 1¼ in. wide, and as much as ¾ in. thick. Each pod holds 4 or 5 large, plump beans. The flavor of Fordhook is delicious, not unlike chestnuts. The plants grow 20 to 30 in. tall and make a spread of almost 2 ft. The strong, upright bushes withstand both whipping rains and strong winds to a remarkable degree. Because of its extra-early maturity, Fordhook will bear profusely even where the summers are comparatively short. Pkt. 15¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$1.65; 10 lbs. \$3.05, postpaid. Not prepaid: 15 lbs. \$3.75; 25 lbs. \$6.00; 50 lbs. \$11.50; 100 lbs. \$22.00.

66 Burpee's New Philadelphia Bush Lima

This excellent Burpee variety is of special value because it matures extremely early. The plants are of upright habit and produce pods with the greatest abundance. The earlier pods are set quite close to the ground. Clusters of 6 to 8 pods are usual. The individual pods are 4½ in. long and 1½ in. wide, each containing four fair-sized beans of splendid quality. Southern planters will find that it surpasses the Sieva or Butter Bean, whereas northern planters will benefit from its earliness and productiveness. Pkt. 15¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$1.80; 10 lbs. \$3.35, postpaid. Not prepaid: 15 lbs. \$4.20; 25 lbs. \$6.75; 50 lbs. \$13.00; 100 lbs. \$25.00.

Stick the seeds edgewise, eye down, 5 in. apart in the row, and cover 2 in. deep with fine soil. Later thin to stand 15 to 18 in. apart in the rows. One pound will sow 150 ft. of row. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size.

63 Burpee's Improved Bush Lima

Large Podded. Uniform, vigorous, and upright growth

A wonderful improvement over the original Burpee Bush Lima—larger pods, bigger beans, greater yield, and fully 8 days earlier. The pods are enormous, borne profusely in clusters of from 5 to 8, and crowded with four or five appetizing beans. Burpee's Improved Bush Lima is the largest podded and most prolific of the Bush Limas. The pods are 5 to 6 in. long; 1¼ in. wide. Even when fully matured the beans are of luscious flavor. The plants make a uniform, vigorous, upright growth, with heavy foliage. The pods are borne in clusters held well above the foliage. Full-grown bushes measure 30 in. in height and 24 in. across the top. Matures in 85 to 90 days after sowing. Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 85¢; 5 lbs. \$1.55; 10 lbs. \$2.90, postpaid.

Not prepaid: 15 lbs. \$3.45; 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

60 Burpee's Bush Lima

This is the original dwarf, large-seeded Bush Lima as first introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant from 2 to 3 ft. in diameter. Pkt. 10¢; ½ lb. 25¢; 1 lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.45; 10 lbs. \$2.70, postpaid. Not prepaid: 15 lbs. \$3.15; 25 lbs. \$5.00; 50 lbs. \$9.50; 100 lbs. \$18.00.

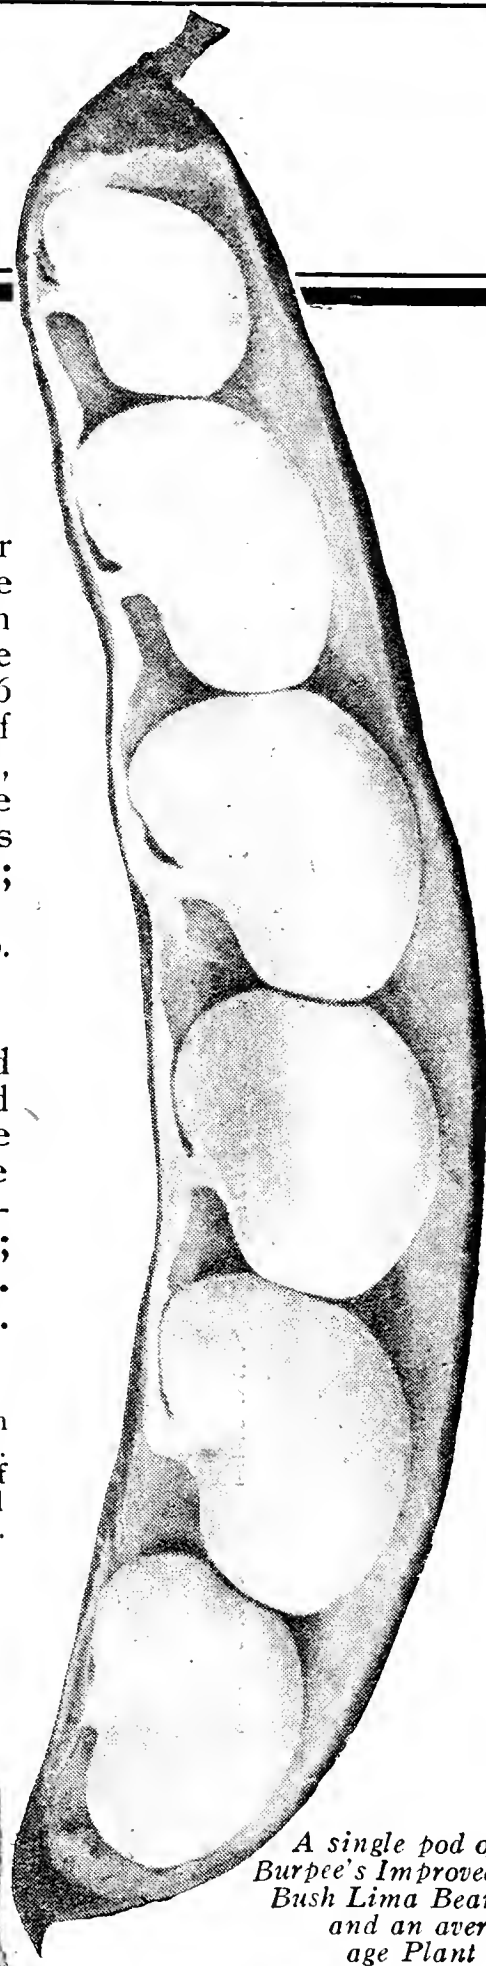

68 Wood's Prolific

or **Improved Henderson Bush Lima** This variety is one of the earliest Bush Limas, maturing in from 65 to 75 days, second only to Burpee's New Philadelphia. It belongs to the class of Small Limas. Grown in the South under the name of "**Butter Beans.**" Very hardy, maturing a week before Burpee's Bush Lima, and valuable for growing in the North. The green shell beans are of delicious, sweet flavor. Pkt. 10¢; ½ lb. 25¢; 1 lb. 35¢; 2 lbs. 55¢; 5 lbs. \$1.20; 10 lbs. \$2.15, postpaid. Not prepaid: 15 lbs. \$2.40; 25 lbs. \$3.75; 50 lbs. \$7.00; 100 lbs. \$13.00.

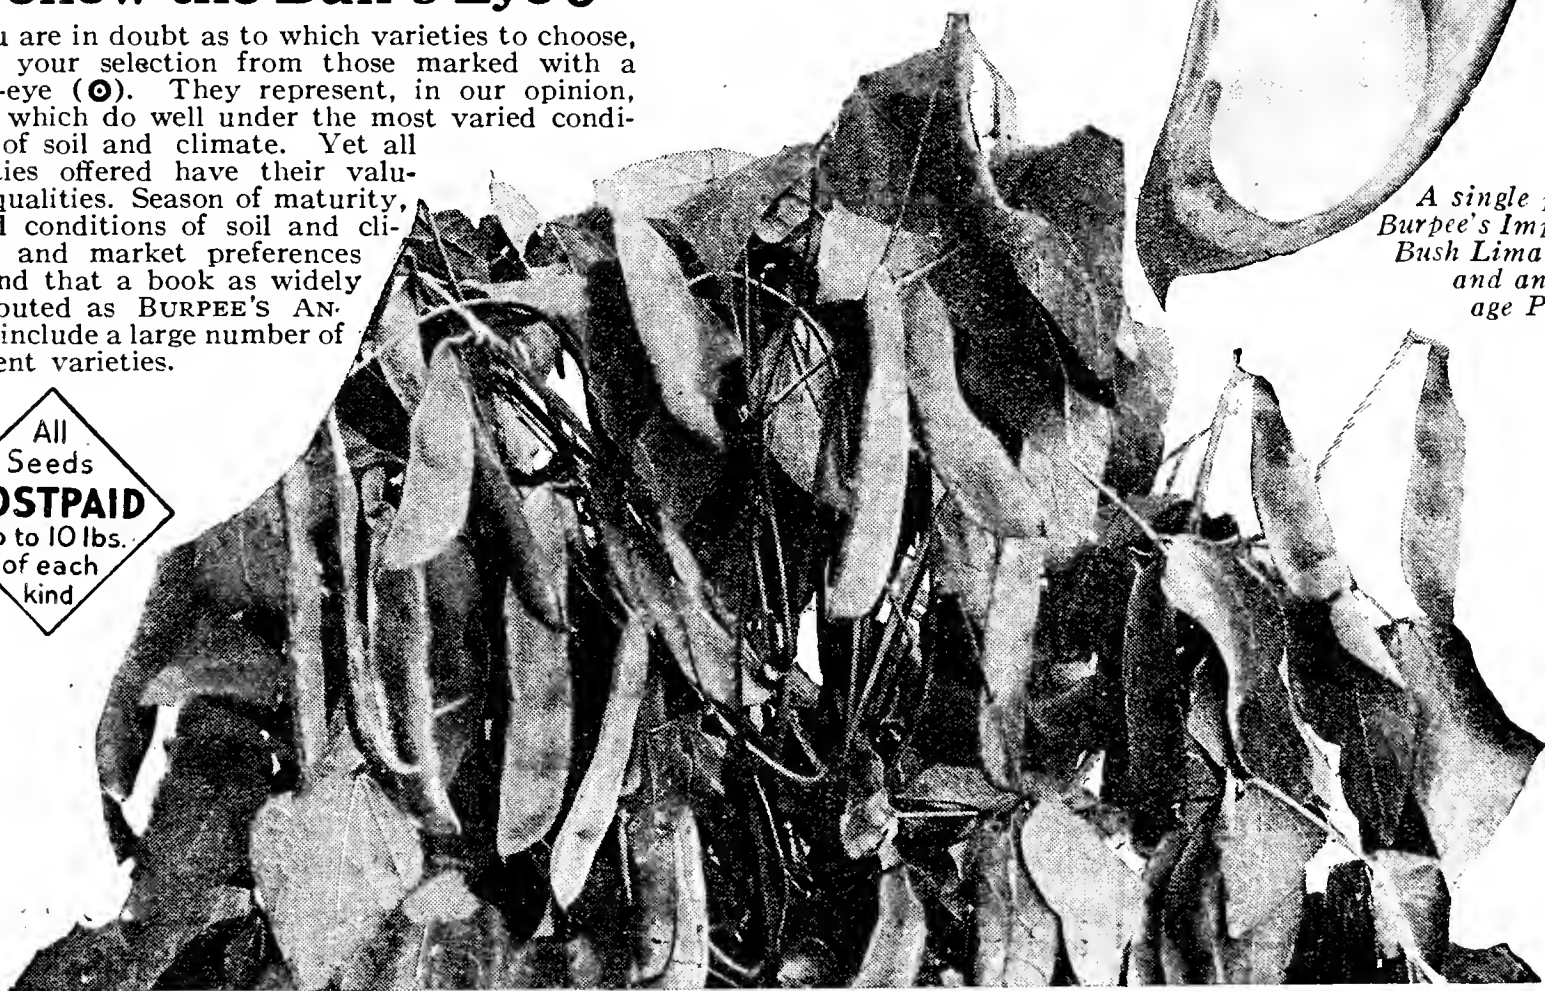

Follow the Bull's Eye

If you are in doubt as to which varieties to choose, make your selection from those marked with a bull's-eye (◉). They represent, in our opinion, those which do well under the most varied conditions of soil and climate. Yet all varieties offered have their valuable qualities. Season of maturity, varied conditions of soil and climate, and market preferences demand that a book as widely distributed as BURPEE'S ANNUAL include a large number of different varieties.

Burpee's GREEN

Beans are one of the most satisfactory and productive vegetables because they grow so vigorously and bear with such wonderful abundance. Plants of the Bush Beans range from 15 to 20 in. tall. Seed cannot be sown until the weather is quite warm. In the vicinity of Philadelphia, early May is about the right time for the first sowing of Bush Beans. A warm, well-drained, sandy loam is best suited. The beans are most delicious if they are picked before they have reached full size, and the plants will continue bearing much longer. The early varieties mature in from 45 to 65 days.

13 Bountiful ☉

A very attractive Bush Bean of choicest quality. It has proved to be unexcelled on light sandy soils, where the bushes will produce an extra-large crop of handsome beans. The pods are 6 in. long, flat, meaty, tender, strictly stringless, and of rich flavor. Matures early. An attractive market variety. Olive-yellow seeds. Pkt. 10¢; ½ lb. 25¢; 1 lb. 40¢; 2 lbs. 60¢; 5 lbs. \$1.15; 10 lbs. \$2.05, postpaid. Not prepaid: 15 lbs. \$2.25; 25 lbs. \$3.50; 50 lbs. \$6.50; 100 lbs. \$12.00.

11 Full Measure

A medium-early Bush Bean forming a well-branched, round plant bearing a large crop of perfectly stringless, very fleshy, deep green pods measuring 5 in. in length. The pods are round in cross-section. Their quality is superb and the flavor is rich and satisfying. Fawn seeds marked with reddish brown. Pkt. 10¢; ½ lb. 25¢; 1 lb. 35¢; 2 lbs. 55¢; 5 lbs. \$1.15; 10 lbs. \$2.05, postpaid. Not prepaid: 15 lbs. \$2.25; 25 lbs. \$3.50; 50 lbs. \$6.50; 100 lbs. \$12.00.

23 Giant Stringless Green-Pod ☉

Pods grow 6 in. long and are meaty, nearly round, brittle, and stringless. Somewhat similar to Burpee's Stringless Green-Pod, but matures a few days later. Pods are straight, quite long, and rather slender. The color of the pods is lighter than Burpee's Stringless Green-Pod, and they show deeper depressions between the beans. The seeds are a light brown color. The plants are of strong growth, making large and compact bushes that bear a fine crop of pods. Pkt. 10¢; ½ lb. 25¢; 1 lb. 35¢; 2 lbs. 50¢; 5 lbs. \$1.10; 10 lbs. \$1.95, postpaid. Not prepaid: 15 lbs. \$2.10; 25 lbs. \$3.25; 50 lbs. \$6.00; 100 lbs. \$11.00.

20 Keeney's Stringless Refugee

A desirable variety producing smooth, light green pods, averaging 5¼ in. in length, that are brittle and tender and absolutely stringless at all stages. The meat is thick and fleshy, of a particularly fine and mild flavor. Pods are smooth and present a most attractive appearance, being of a light green color. A splendid market and home variety. The seeds are marked with fawn and purplish black. Pkt. 10¢; ½ lb. 25¢; 1 lb. 35¢; 2 lbs. 55¢; 5 lbs. \$1.15; 10 lbs. \$2.05, postpaid. 19 Refugee, or 1000 to 1

This bean has proved to be particularly popular with the canning trade, though it is not less desirable for market and for the home garden. It is a productive and vigorous variety, bearing an enormous crop of long, slender, round, slightly curved pods measuring 5 to 5½ in. in length. They have slight strings, are fine grained, and of good flavor. Pkt. 10¢; ½ lb. 25¢; 1 lb. 35¢; 2 lbs. 50¢; 5 lbs. \$1.05; 10 lbs. \$1.85, postpaid. Not prepaid: 15 lbs. \$1.95; 25 lbs. \$3.00; 50 lbs. \$5.50; 100 lbs. \$10.00.

27 Tendergreen ☉

This is a new Bush Bean of utmost value. The plants make a strong and vigorous growth. They are well branched and carry a great quantity of beautiful light green beans. The pods grow 7 in. long. They are round, extremely meaty, and tender. Even when fully grown they are absolutely stringless. We are convinced that this will be one of the leading beans in years to come. It somewhat resembles Full Measure, but represents a decided improvement upon that popular variety. You should, at least, give it a trial this year. Pkt. 10¢; ½ lb. 25¢; 1 lb. 40¢; 2 lbs. 65¢; 5 lbs. \$1.20; 10 lbs. \$2.15, postpaid. Not prepaid: 15 lbs. \$2.40; 25 lbs. \$3.75; 50 lbs. \$7.00; 100 lbs. \$13.00.

Burpee's Seeds Grow

BUSH Beans

To provide for a continuous supply, seed should be sown every 10 to 14 days up to August 10th. Where summers are hot and dry, sow up to the end of May and again from July 15th to August 10th. Plant in rows not less than 18 in. apart, cover with 2 in. of soil, and firm the surface to assist germination. One pound of seed sown thinly fills a row 250 ft. long; usually 90 lbs. of seed are sown per acre.

We Especially Recommend

10 Burpee's Stringless Green-Pod

The Finest Green-Pod Bush Bean in Cultivation

Accepted for years as unequalled by any other Green-Pod Bush Bean. The attractive, rich green pods are about 6 in. long, slightly curved, and are so thick, even when quite young, as to be double-barreled. Even when fully grown, the pods are meaty and juicy, lacking the faintest signs of any strings. Always tender, brittle, and of very fine flavor. The plants are medium large, of somewhat spreading growth, with dark green foliage, and always of strictly bush form. Enormously productive. Noted for their hardiness and extreme earliness. Seeds are a dark coffee-brown color. Pkt. 10¢; ½ lb. 25¢; 1 lb. 40¢; 2 lbs. 65¢; 5 lbs. \$1.20; 10 lbs. \$2.15, postpaid. SHELL BEANS *For use as Dried Beans during the winter season*

Extensively grown everywhere for use as dried beans. The small-seeded varieties, like Robust Pea Bean, are sown at the rate of 30 to 45 lbs. per acre. The larger-seeded varieties require 60 to 75 lbs. per acre; 1 lb. for 150 to 200 ft. of row. Shell Beans possess high nutritive value, due to their large percentage of protein. In addition to the varieties listed below, the seeds of any of the other beans offered by us can be used for baking, though the white-seeded varieties are very much more preferred for this purpose due to their attractive appearance. Shell Beans should be left on the vines until they are thoroughly matured and dried out before they are put away for winter use.

26 Dwarf Horticultural—Stringless

This is an excellent double-purpose variety, with thick, flat pods 5 in. long. As they are entirely stringless they are fine for snap and green-shell purposes. Light buff seeds, spotted red. Burpee's Pole Beans

Pole Beans are extremely productive. They come into bearing later than the Bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy than Bush Beans and are therefore planted a week later. They mature in from 70 to 85 days. Sow the seed when the weather has warmed up, about the second week of May and not later than June 15. Set poles 4 ft. apart and place 8 to 10 beans around each; 1 pound of seed for 125 poles. When plants are well established, thin to 2 or 3 plants to a pole; or, the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed. Pick the beans before they have reached full size.

72 Kentucky Wonder ☉ or Old Homestead

We prefer this to most other green-podded Pole Beans. It is early, climbs well, and bears a fine crop of **large green pods**, 7 to 9 in. long. Pods are thick and meaty, **tender, brittle**, and of good quality, showing slight strings as the pods reach full size. They are excellent for table if used before they reach their full size. Though thick they appear slender on account of their great length. The pods are distinctly curved. Seeds are brownish drab. BURPEE'S *Delicious* BEETS

Make repeated sowings throughout the season. Start the first sowing early in the spring as soon as the ground can be worked. Follow this with other sowings made 3 to 4 weeks apart up to the end of July. Early in July make a large sowing to produce full-size roots for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth. Place the rows 12 in. apart and use one oz. of seed for 100 ft. of drill. Thin to stand 3 to 4 in. apart before the plants begin to crowd. 4 to 6 pounds of seed are needed to sow one acre in drills. The early varieties mature in 45 to 50 days; the midseason and late varieties require 60 to 65 days.

Burpee's CAULIFLOWER

Cauliflower is one of our choicest vegetables. For an early crop, start the seed indoors during March and set into the open by the end of April. For a main or fall crop, sow the seed during June and plant out the latter part of July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One oz. will give 1000 to 1500 strong plants; $\frac{1}{4}$ lb. is required for one acre, placing the rows 3 ft. apart and the plants 2 ft. apart in the rows. Early (E) varieties require from 52 to 65 days to mature. Late (L) varieties require 90 days.

Dry Weather*

245 Burpee's Dry Weather ☉

(E) Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought resistant and will produce heads when all other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a Cauliflower of the highest quality, producing large, pure white heads only a week later than Burpee's Best Early. The heads are considerably larger than those of that famous variety, and are surrounded by more foliage, making them less suitable for forcing. Its drought resistance makes it a most important variety for all dry sections. The white curd is closely formed, of fine texture, smooth, and solid. Individual heads weigh 2 lbs. each. Pkt. 15¢; $\frac{1}{4}$ oz. 85¢; $\frac{1}{2}$ oz. \$1.45; oz. \$2.50; 4 ozs. \$7.50; $\frac{1}{2}$ lb. \$13.75; lb. \$25.00.

244 Burpee's Best Early

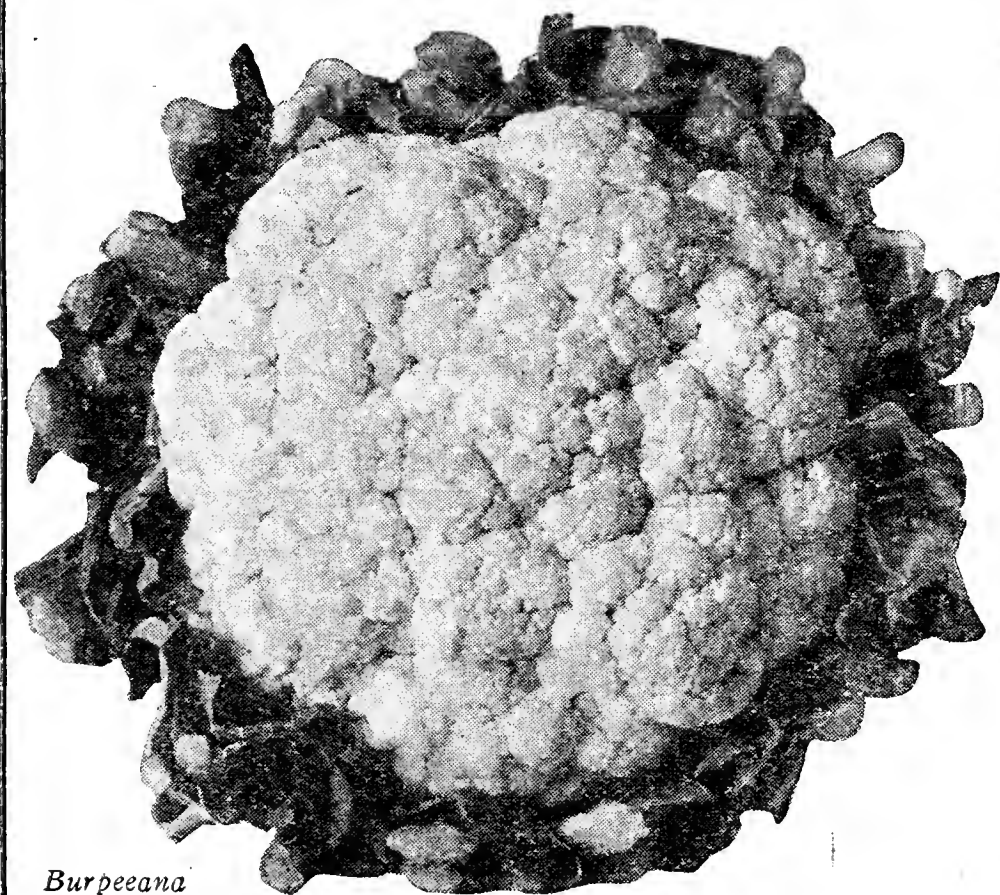

(E) A splendid extra-early Cauliflower, unexcelled for certainty of heading. Always can be depended upon to give a heavy crop. Of strong growth, with erect, pointed, dark green leaves growing closely about the heads. Grown in good soil, the snow-white heads measure 8 to 10 in. across. It is an excellent market and home-garden variety and should be sown so that the heads will mature during either early summer or late fall. Of extra-fine quality. Pkt. 15¢; $\frac{1}{4}$ oz. 75¢; $\frac{1}{2}$ oz. \$1.35; oz. \$2.40; 4 ozs. \$7.20; $\frac{1}{2}$ lb. \$13.20; lb. \$24.00.

249 Extra-Early Dwarf Erfurt (E)

We offer an extra-select strain of this choice variety of the popular Erfurt type, which is known for its reliability in heading. Of dwarf compact growth with large heads of uniform size, having a closely formed, very smooth, pure white curd of finest flavor. Pkt. 15¢; $\frac{1}{4}$ oz. 75¢; $\frac{1}{2}$ oz. \$1.35; oz. \$2.40; 4 ozs. \$7.20; $\frac{1}{2}$ lb. \$13.20; lb. \$24.00.

258 Veitch's Autumn Giant (L)

We consider this the finest of the late Cauliflowers, producing compact white heads surrounded by a mass of large spreading leaves. Like all late varieties, it is not nearly so reliable in heading as the earlier types. Pkt. 10¢; $\frac{1}{4}$ oz. 25¢; $\frac{1}{2}$ oz. 35¢; oz. 50¢; 4 ozs. \$1.50; $\frac{1}{2}$ lb. \$2.75; lb. \$5.00.

Burpeeana

253 Burpeeana ☉

(E) This is Super Snowball as offered by Burpee. It stands out as the most valuable Cauliflower. In the tests of the Pennsylvania State College it appeared as the best of all strains, maturing not quite so early as Burpee's Fordhook. On our own trial farms it proved itself head and shoulders above all other varieties. It is an early variety, with the heads forming all at one time, showing a uniformity of size, shape, and type that is truly astonishing. Beautiful, round, pure white heads with smooth curds. Of highest quality. Pkt. 25¢; $\frac{1}{4}$ oz. \$1.20; $\frac{1}{2}$ oz. \$2.00; oz. \$3.50; 4 ozs. \$10.50; $\frac{1}{2}$ lb. \$19.25; lb. \$35.00.

246 Burpee's Fordhook ☉

(E) The earliest of all varieties we have ever grown. The fact that we named this Fordhook is ample proof of our high esteem for this variety. It will head up well even under unfavorable conditions when most other varieties fail to give a satisfactory crop of good-sized, marketable heads. The plants are dwarf and compact, yet the heads measure fully 6 in. in diameter. They are well rounded and have a fine, closely formed curd of a pure white color. After another season of watching this variety in our trial grounds and comparing it with other varieties we are even more enthusiastic about its qualities, and we wish that every grower of Cauliflower could give it a trial this year. Pkt. 15¢; $\frac{1}{4}$ oz. 85¢; $\frac{1}{2}$ oz. \$1.50; oz. \$2.60; 4 ozs. \$7.80; $\frac{1}{2}$ lb. \$14.30; lb. \$26.00.

247 Early Snowball

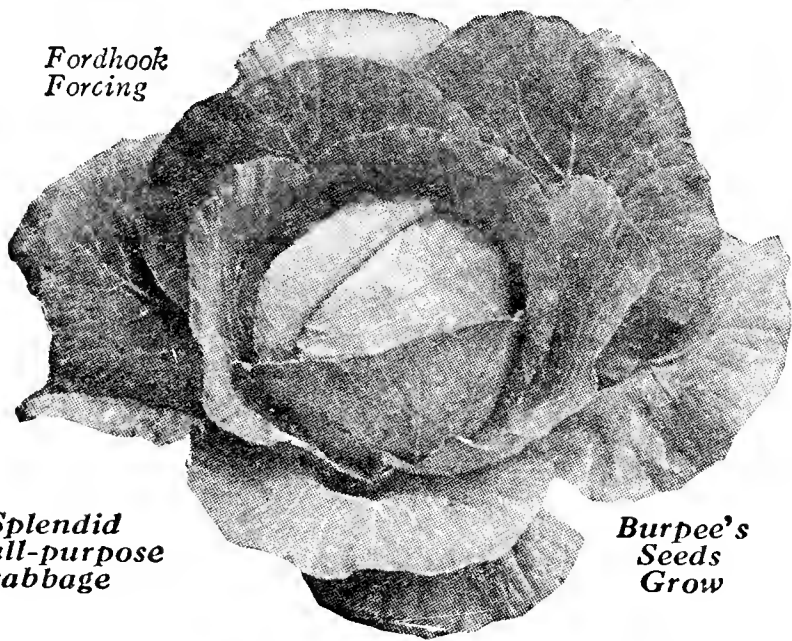

(E) Many market growers claim for Early Snowball first place for both early and late planting. It is also splendid for forcing in the greenhouse and frames. Brings a good price in the early market and stands shipping very well. The plants are dwarf. They have a well-rounded head about 6 in. in diameter and a smooth, compact curd. The heads weigh from $1\frac{1}{2}$ to 2 lbs. each and are, therefore, of a size that will sell well in all markets. Pkt. 10¢; $\frac{1}{4}$ oz. 85¢; $\frac{1}{2}$ oz. \$1.45; oz. \$2.50; 4 ozs. \$7.50; $\frac{1}{2}$ lb. \$13.75; lb. \$25.00.

(M) This large firm Cabbage is fine for fall use and winter storage. The heads measure 10 to 11 in. across and 7 in. deep. They are solid and heavy, weighing from 9 to 10 lbs. each. It has the reputation of doing better in hot dry weather than any other Cabbage. The heads are round, flattened on the top. Pkt. 10¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; 1 lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

Burpee's Allhead Early

177 Burpee's Allhead Early ☉

The Earliest of all Large Cabbages

(E) A wonderful Cabbage of attractive appearance and of the finest quality. It is the earliest of all large Cabbages, forming well-rounded, flattened heads which are remarkably solid throughout. The plants are very uniform in size and color. Sown about July 10 (in the vicinity of Philadelphia) it will head up just before freezing weather. It is equally good for summer and for winter use. A fine winter-keeper and widely used for kraut. Probably more largely used than any other winter variety. The heads measure 8 to 9 in. across and are 6½ to 7 in. deep, weighing 6 to 7 lbs. each. Pkt. 10¢; oz. 30¢; 4 ozs. 85¢; ½ lb. \$1.25; 1 lb. \$2.25; 2 lbs. \$4.20; 5 lbs. \$10.10.

170 Marion Market ☉

(E) This Cabbage resembles Copenhagen Market but matures about 10 days later and makes a much larger plant. Its most distinguishing feature is its complete resistance to Cabbage yellows and it is, therefore, valuable for land where "yellows-resistant" Cabbage is needed. Yellows-resistant varieties of Cabbage should be more generally grown; you will then be reasonably sure of a crop. The heads are almost round and very solid. It is a hardy, highly bred strain, grown extensively for kraut and long-distance shipping. It has produced as much as 26 tons per acre. Pkt. 15¢; oz. 50¢; 4 ozs. \$1.50; ½ lb. \$2.75; 1 lb. \$5.00; 2 lbs. \$9.30; 5 lbs. \$22.50.

Wisconsin All Seasons

190 Wisconsin All Seasons ☉

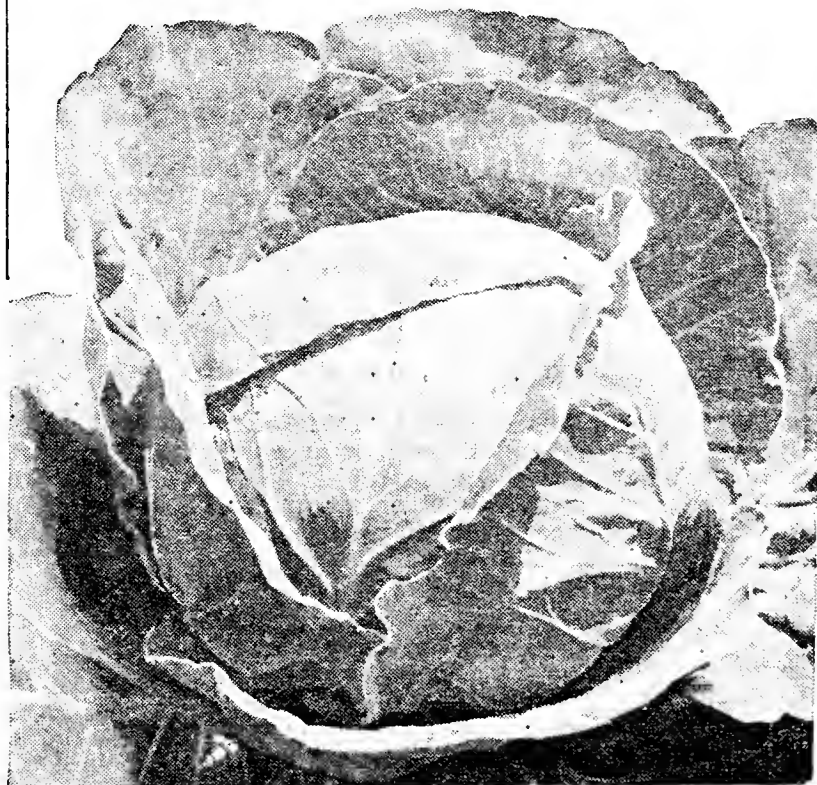

(M) We recommend this Cabbage very highly as a midseason variety for sections which require a "yellows-resistant" variety. It has been bred from All Seasons and has inherited all of the good qualities of that excellent Cabbage. It is said to be the hardest of all flat-head varieties and is much in demand for making kraut. It will stand unfavorable conditions of drought and hot weather remarkably well. Pkt. 15¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; 1 lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

178 Burpee's Copenhagen Market ☉

Early, Very Solid, and an Immense Yields

(E) This world-famous Cabbage is equally valued for home growing, for market, and for making into kraut. The heads are perfectly round, 6 to 7 in. in diameter, and weigh 3½ to 4 lbs. each. They are solid, heavy, and have a small core. The plants are short stemmed, compact, and have just a few small saucer-shaped outer leaves. The quality is superb. Matures about a week after Golden Acre.

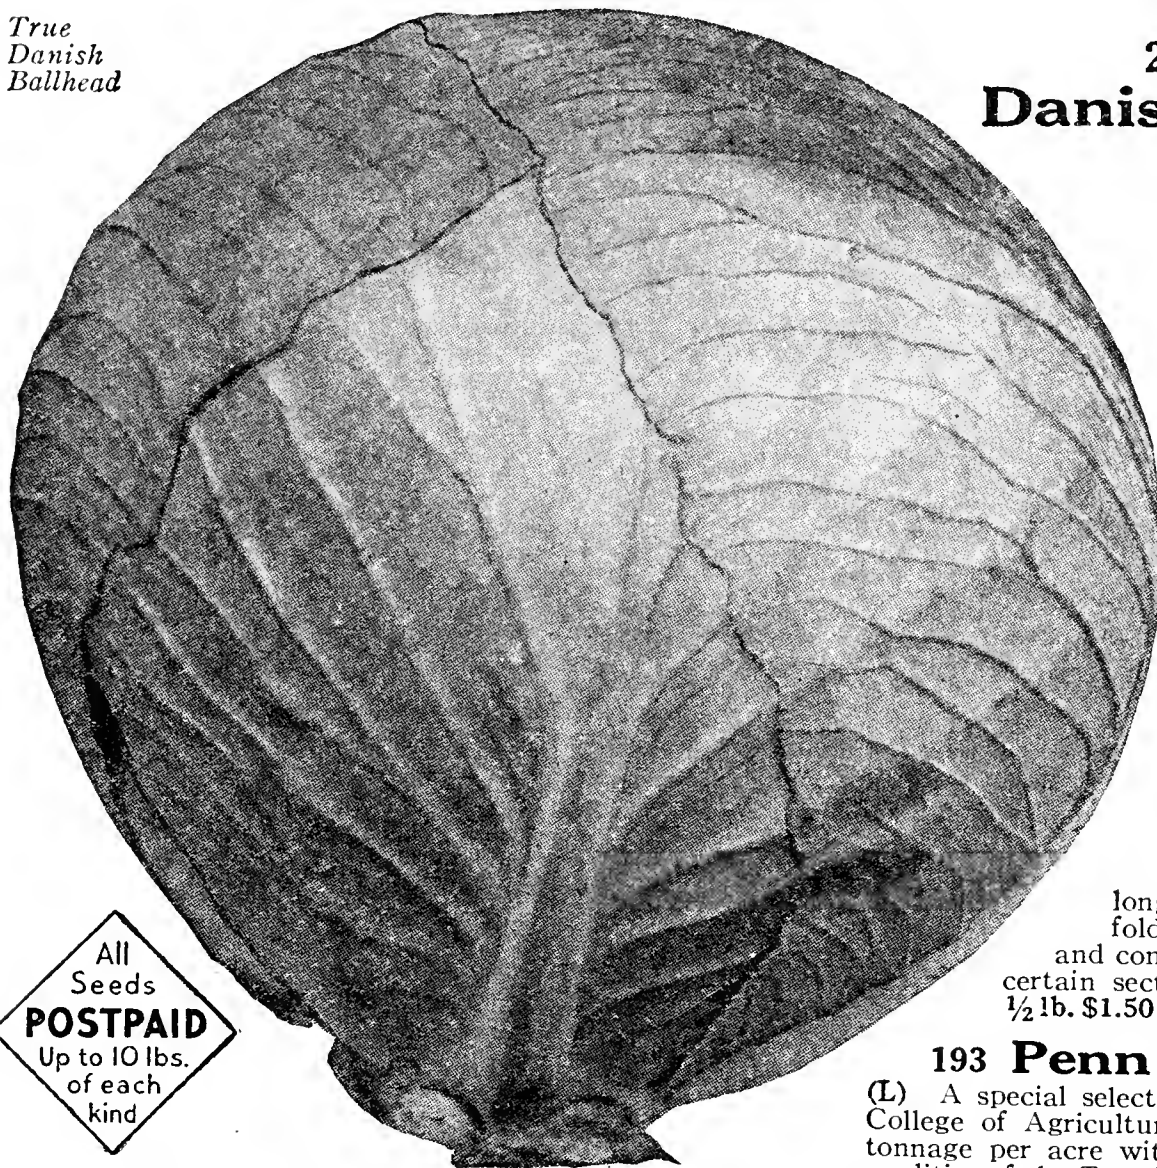

Pkt. 10¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; 1 lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

188 Stein's Flat Dutch

(M) A midseason variety, similar in many ways to Premium Flat Dutch but is quite a few days earlier. The heads are not quite so large as those of the late strain but they are compact and heavy, being carried on a medium stem. We have an excellent strain of this foremost Cabbage which is grown in quantity for market and for sauerkraut. Always gives a heavy yield if grown under proper conditions and is most reliable. It is much prized for its blight resistance, solidity, and heavy yield. The heads are perfectly round, extremely solid, and heavy. Under average conditions they measure 8 to 9 in. across and almost as deep, weighing from 8 to 9 lbs. each. They will keep in perfect condition throughout the winter. Our special Burpee strain is particularly fine and matures 10 days ahead of Ballhead. Pkt. 10¢; oz. 35¢; 4 ozs. 95¢; ½ lb. \$1.50; 1 lb. \$2.75; 2 lbs. \$5.10; 5 lbs. \$12.35.

204 Middle Stem Danish Ballhead

Chinese or Celery Cabbage

Chinese Cabbage has found its way into a large number of American gardens because it is a wholesome and tasty vegetable either cooked or raw. It may be served like Lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary Cabbage. Where summers are cool it may be sown in spring, but in the vicinity of Philadelphia seeds sown early in August have proved to give the best results. Makes full-size heads in 60 to 75 days after sowing. May be stored for about two months. Ask for free cultural directions.

214 Chihli ☉

A wonderful variety and one that deserves to head our list as it is an early and sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. 210 New Joy

One of the newer varieties of Chinese Cabbage which produces excellent heads during the cool autumn months. Has small, deep green leaves and heavy, closely folded, long, white stalks. Resembles Cos Lettuce. Very sweet and delicious. Pkt. 15¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; 1 lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

212 Pe-Tsai

Resembles Cos Lettuce as much as Cabbage, although it has a decided Cabbage flavor. One of the oldest varieties, with large, light green outer leaves. The thick, pure white heart is tender, juicy, and has an agreeably pungent flavor. Makes larger heads than Wong Bok described below. Do not sow seed too early if you wish good plants. August first is early enough. Pkt. 10¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; 1 lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

Wong Bok

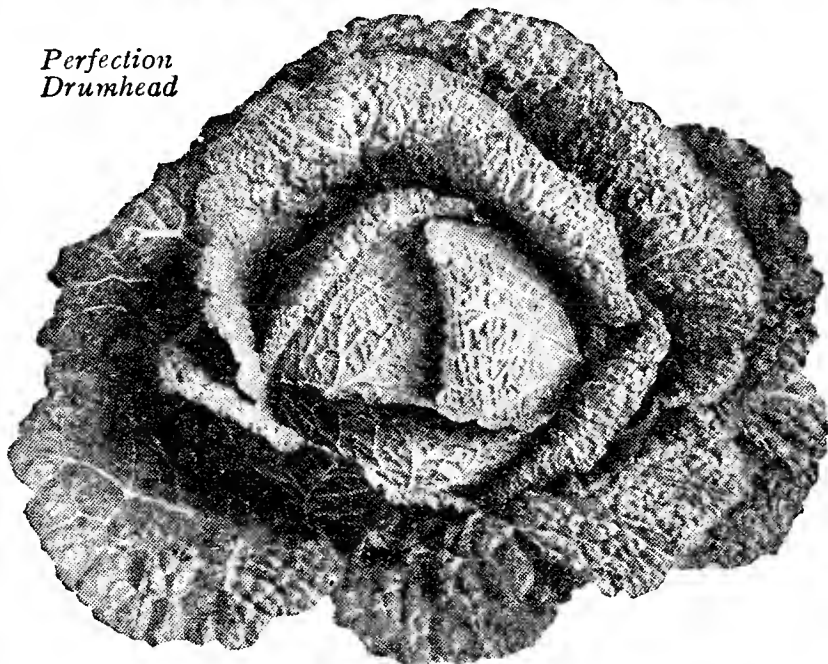

174 Wisconsin Hollander (L)

This late Cabbage belongs to the "Yellows-resistant" group and has become a foremost variety in sections where this disease prevents growing of non-resistant Cabbage. It has been developed from the famous Danish Ballhead but requires about 10 days longer to come to maturity. The plants are larger than Ballhead, and where conditions are favorable will produce a heavier yield per acre. When fully mature the heads are sometimes slightly flattened on top. Pkt. 15¢; oz. 40¢; 4 ozs. \$1.15; ½ lb. \$1.90; 1 lb. \$3.50; 2 lbs. \$6.50; 5 lbs. \$15.75.

Burpee's Tasty Carrots

Sow the seed thinly in shallow drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest Carrots. Cultivate throughout the season to insure smooth straight roots. For winter storing, sow a long row about the middle of June which will make full size roots before cold weather sets in. One ounce of Carrot seed will sow 250 ft. of drill. 3 lbs. of seed is required to drill one acre. The early varieties mature in 60 to 65 days after sowing. The midseason Carrots require 65 to 75 days and the late varieties 75 to 85 days to come to maturity.

CARROTS for STOCK FEEDING

Carrots are a palatable, highly nutritious, and wholesome food for all kinds of stock and are eaten greedily by them. Many of the table varieties of Carrots are grown extensively for this purpose and they impart a beautiful butter-yellow color to the milk if fed to cows. Sow 4 lbs. of seed per acre.

See page 141

BURPEE'S FINEST CELERY

For the earliest crop start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. They will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or paper cylinders may be used to blanch the stalks. One oz. of seed is sufficient for 600 ft. of drill. One oz. sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ozs. are needed for planting one acre.

The early (E) varieties of Celery mature in about 120 days from the time the seed is sown. They are adapted for starting indoors, or outdoors when the ground is fit for planting. The late (L) Celeries need 140 days to come to maturity. They are planted extensively for late fall use and winter storing, although many of the early varieties also store quite well.

272 Burpee's Fordhook Celery

The Largest, Most Solid, and Finest Nut-Flavored Celery in Existence

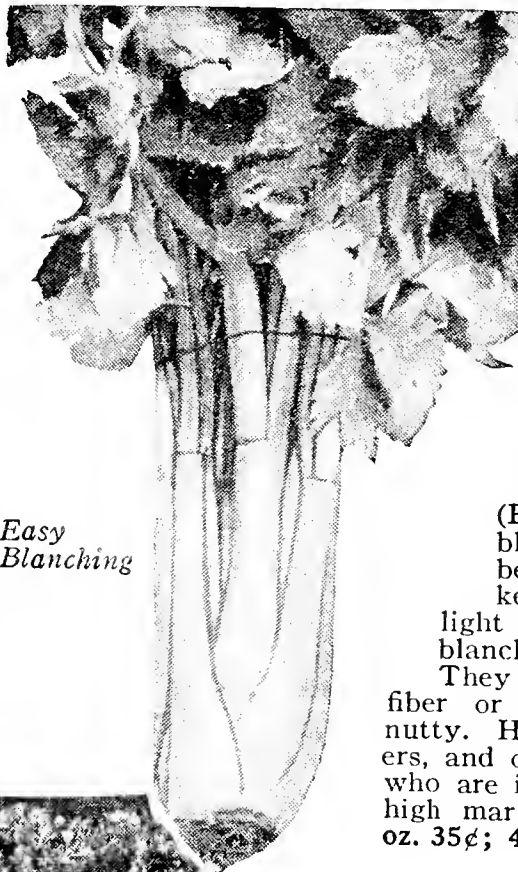

(L) Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. The plants are stocky and compact, averaging 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a small tender heart in the center. They are extremely thick, measuring over $\frac{1}{2}$ in. in diameter. Always they are tender, crisp, and juicy. Fordhook Celery will keep in perfect condition throughout the winter. Pkt. 25¢; $\frac{1}{2}$ oz. 60¢; oz. \$1.00; 4 ozs. \$3.00; $\frac{1}{2}$ lb. \$5.50; 1b. \$10.00.

267 Easy Blanching

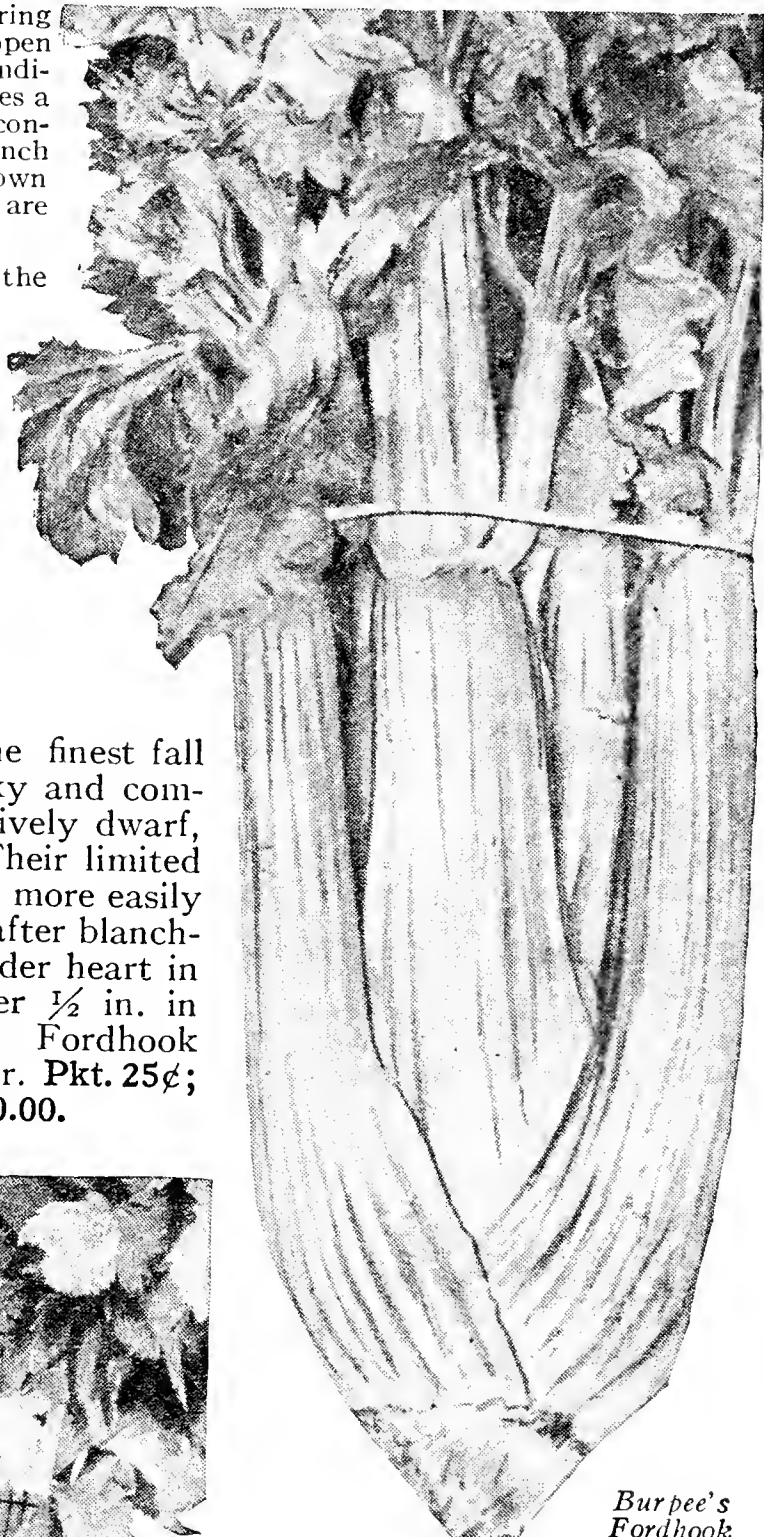

Easy to Blanch and an Excellent Winter Keeper

(M) This is a midseason or second-early Celery which will be ready for use soon after Golden Self-Blanching. It resembles Golden Self-Blanching in size and general characteristic of growth, but the foliage is a beautiful bright rich green. The plants make a vigorous, upright yet compact growth and the stalks are easily blanched to a beautiful pure white color. They are thick, solid, heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra fine flavor. Easy Blanching has desirable blight-resistant qualities and has proved to be hardier than Golden Self-Blanching. While it is a midseason Celery, it also stores well throughout the winter. It has become a great favorite with both home gardeners and market growers who appreciate a quality Celery for fall and winter. Pkt. 10¢; $\frac{1}{2}$ oz. 25¢; oz. 45¢; 4 ozs. \$1.40; $\frac{1}{2}$ lb. \$2.60; 1b. \$4.75.

Easy Blanching

Burpee's Fordhook Celery

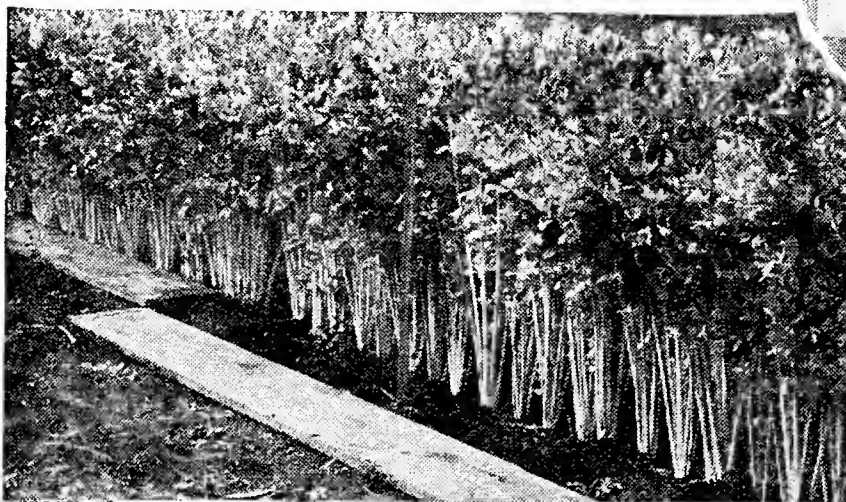

266 White Plume

(E) The earliest and the most easily blanched of all Celery varieties, at its best right after digging but does not keep well. The foliage is an attractive light green tinted with white. When blanched, the stalks are pure snowy white. They are tender and crisp, without any fiber or strings. Their flavor is rich and nutty. Highly recommended to home gardeners, and of decided value to market growers who are interested to benefit from the early high market prices. Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 35¢; 4 ozs. \$1.00; $\frac{1}{2}$ lb. \$1.65; 1b. \$3.00.

268 Golden Plume

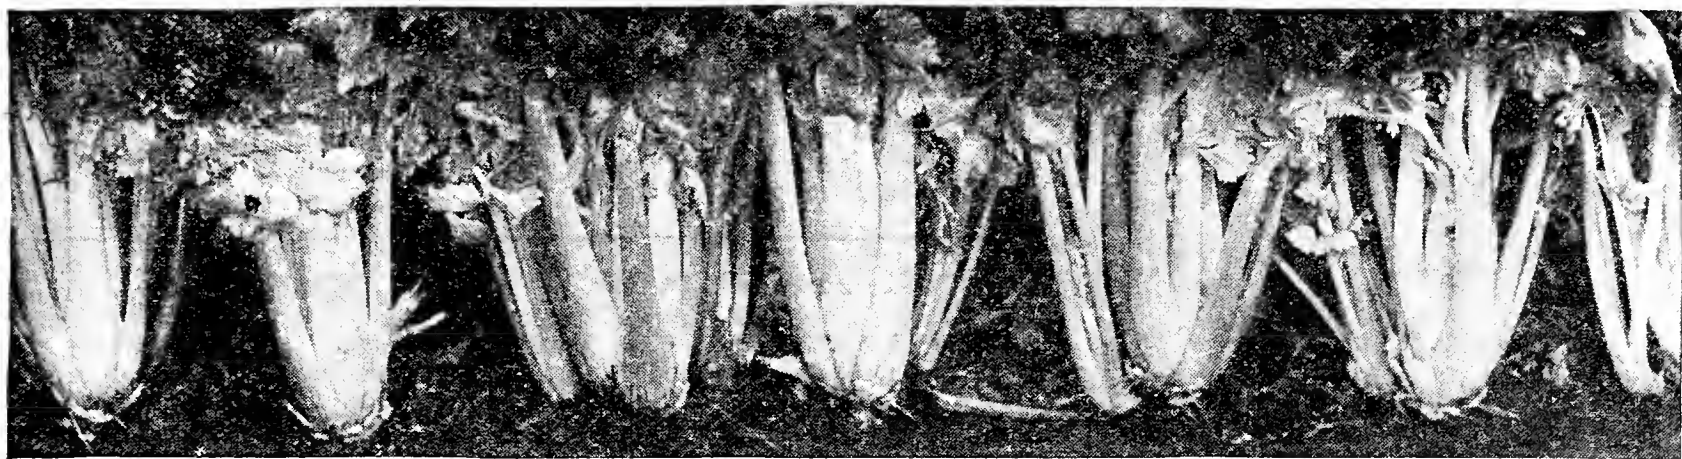

Apparently more disease-resistant than other Yellow Celeries

(E) This is also called Wonderful, a name that is most appropriate for this splendid early variety. Some gardeners consider it the best early Celery in existence. It is quite resistant to blight and rot and possesses very good storing qualities. The plants are of medium size, stocky, compact, and have a thick, full, creamy heart. The stalks blanch readily and are of excellent table quality. It resembles Golden Self-Blanching but is earlier, larger, and of more vigorous growth. A fine variety for the home and market garden. Burpee's Golden Self-Blanching—Original Dwarf Strain

262 Burpee's Golden Self-Blanching ☉

Selected French-Grown Seed: Original Dwarf Strain

(E) There are many growers who insist on having the original French-grown seed of this foremost Celery though it is somewhat more expensive than the American-grown seed offered below. The plants make a compact dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor. It is a standard market and shipping variety, growing 14 to 18 in. tall. Imported seed grown specially for us in France. Pkt. 20¢; ½ oz. 60¢; oz. \$1.00; 4 ozs. \$3.00; ½ lb. \$5.50; lb. \$10.00.

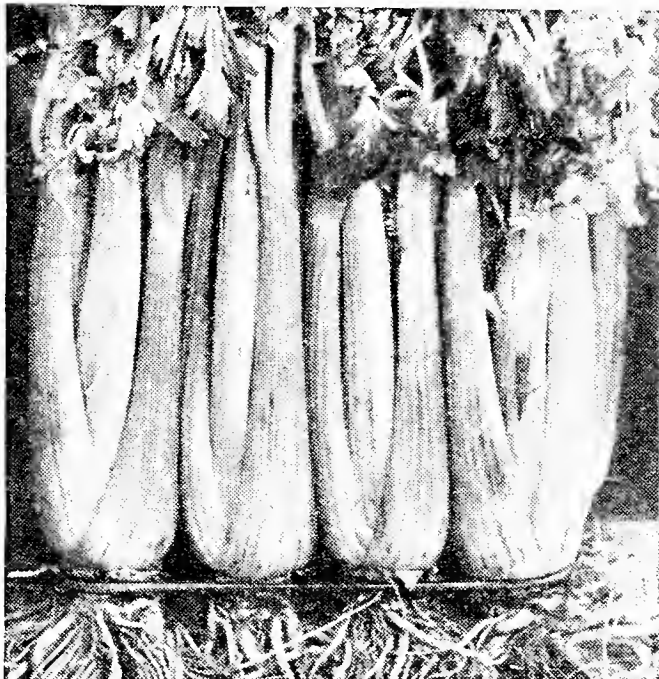

260 Golden Self-Blanching

(E) This is the American-grown seed produced from the dwarf French-grown stock as offered above. It exhibits all the excellent qualities of the original stock and is sown extensively by home gardeners as well as by market growers. The dwarf compact plants are heavy and solid. The heart is large, tender, well blanched, solid, and has a delightful nutty, crisp, and juicy flavor. It will yield a good crop of attractive Celery if grown under average conditions suitable for this crop. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; 4 ozs. \$1.35; ½ lb. \$2.45; lb. \$4.50.

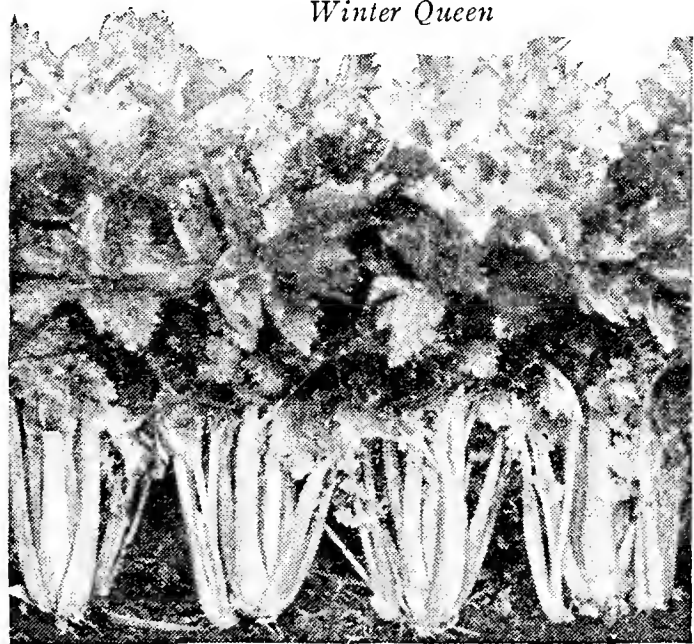

282 Giant Pascal ☉

Stalks Short, Thick, and Broad

(L) Immense, light yellow stalks which will keep in perfect condition throughout the winter. Considered by many the standard winter Celery. The plants are productive, with tall upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months. Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 90¢; ½ lb. \$1.40; lb. \$2.50.

Giant Pascal

Winter Queen

275 Winter Queen

(L) One of the finest dwarf winter Celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for use or market much earlier in the fall. The plants make large bunches of extra-heavy stalks with very large, tightly folded hearts. Pkt. 5¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 90¢; ½ lb. \$1.40; lb. \$2.50.

Celeriac or Turnip-Rooted Celery

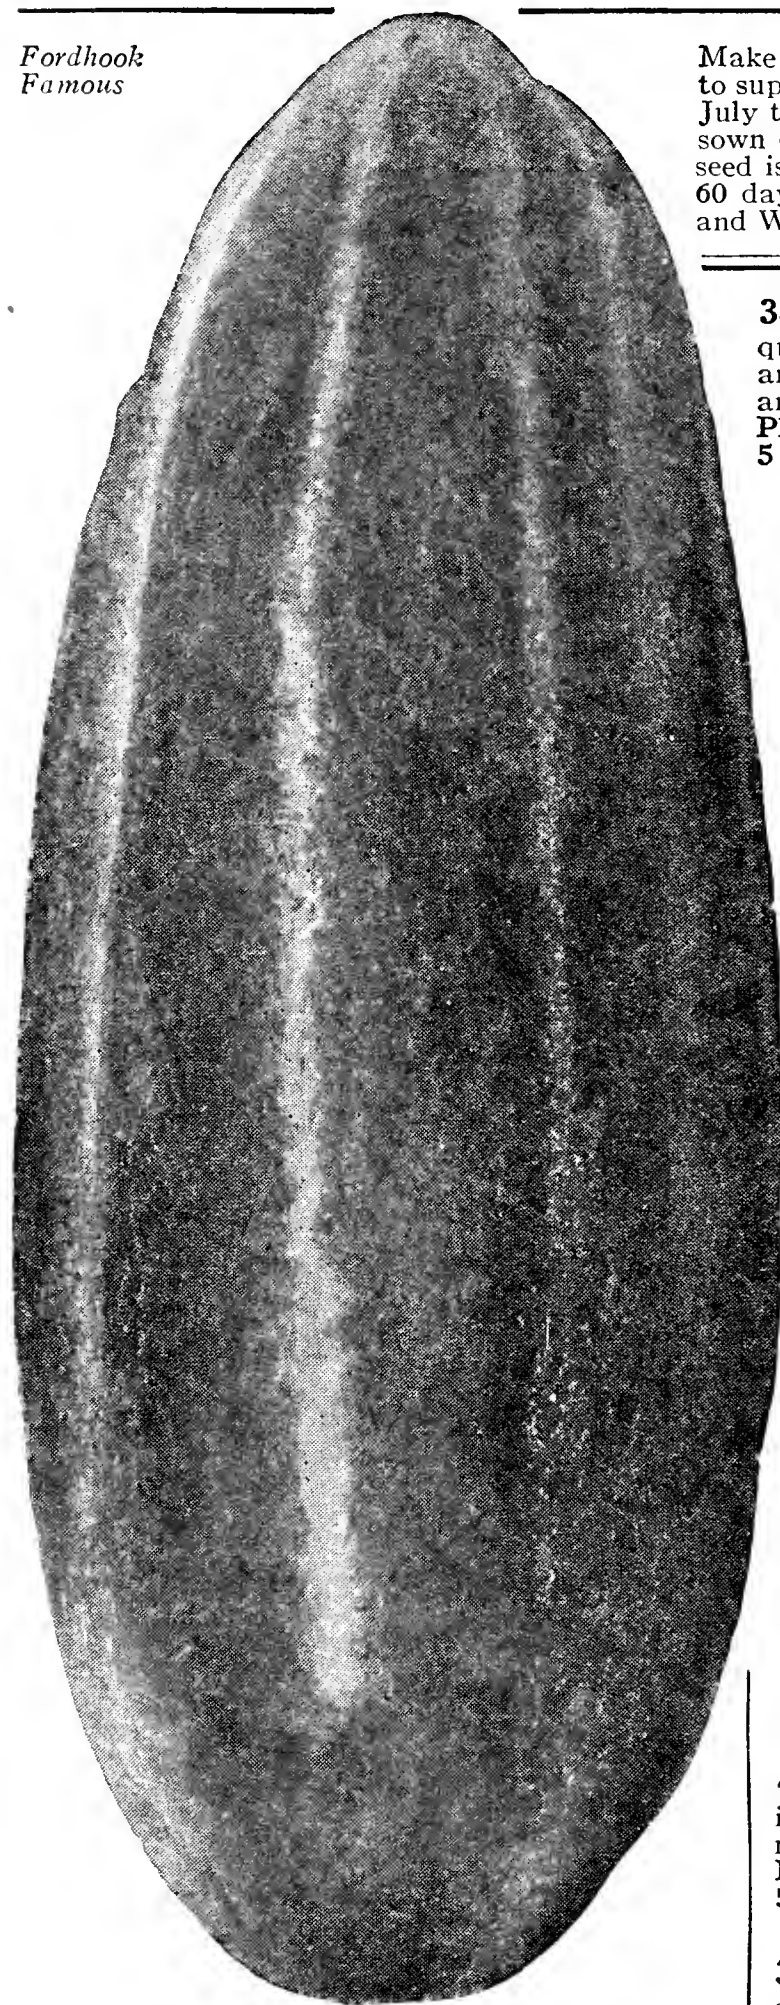

293 Giant Prague

Gradually more and more gardeners are becoming acquainted with this splendid vegetable, which is much easier to grow than Blanching Celery. The edible portion is the large thick root, which is highly valued boiled, or is used in vegetable soup, stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil which is fairly rich in barnyard manure. Frequent cultivation and occasional thorough watering are necessary. When planted on too heavy, as well as freshly and excessively manured soil, the tubers will grow to enormous size; the quality, however, will be rather inferior as the tubers will become stringy. Start the seed in boxes indoors and when the seedlings are large enough to be handled, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderately large size. Does not require blanching. Pkt. 10¢; oz. 30¢; 4 ozs. 90¢; ½ lb. \$1.40; lb. \$2.50.

Iceberg

530 Burpee's Iceberg Ⓞ

Heads large, hard, crumpled, crisp, and sweet

Curled, crisp plants of medium size, producing medium green, wavy, fringed leaves having edges that are tinged with light brown. The heads are compact, medium large, and have few outer leaves and most delicious crisp tender hearts blanched to a silvery white even under average garden conditions. Iceberg is exceedingly vigorous and hardy, so that it will withstand quite hot weather. This is the original Iceberg Lettuce introduced by Burpee in 1894. It should not be confused with New York Improved, which is grown in certain western sections under the name Iceberg. Pkt. 10¢; oz. 20¢; 4 ozs. 60¢; ½ lb. 85¢; 1 lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60.

528 Burpee's Brittle Ice

Heads fairly compact and of conical shape

A fine, quick-growing Lettuce with bright green outer leaves and a nearly white heart that is tender, succulent, and crisp. It retains its crispness and mild flavor to a greater degree during warm weather than any other crisp-head variety except Iceberg. Its luscious refreshing flavor has made it a popular Lettuce with many gardeners. The heads are fairly compact and of conical shape. Each leaf has a thick, white, tender midrib of a crispness and refreshing flavor that suggest the brittleness of thin ice. Pkt. 10¢; oz. 25¢; 4 ozs. 70¢; ½ lb. \$1.10; 1 lb. \$1.85; 2 lbs. \$3.40; 5 lbs. \$8.15.

524 New York Improved Ⓞ

Sweet, tasty, and juicy, known in some sections as **Los Angeles** and **Wonderful**. In the Imperial Valley of California it is grown under the name of Iceberg, though this name belongs rightly and by priority to the variety described as Burpee's Iceberg. The heads grow to immense size and are closely folded. The outer leaves are deep green and the heart is blanched to a beautiful pure white. It is crisp, juicy, and of most appetizing flavor. Pkt. 10¢; oz. 25¢; 4 ozs. 70¢; ½ lb. \$1.10; 1 lb. \$1.85; 2 lbs. \$3.40; 5 lbs. \$8.15.

It is excellent for midsummer planting and can be depended upon to head well. Of the highest quality—crisp, mild, tender, juicy, and well blanched. Cos or Romaine Lettuce

Cos Lettuce or Salad Romaine is much esteemed for its fresh crispness and mild flavor. It is grown widely in the northern states during spring and early summer and to provide a crop of tightly folded, elongated heads for fall use. Dwarf White Heart is the earlier of the two varieties we list, and since it is self-closing, does not require tying up. Paris White Cos forms loose heads which must be tied together with strings in order to blanch them properly and make them tender.

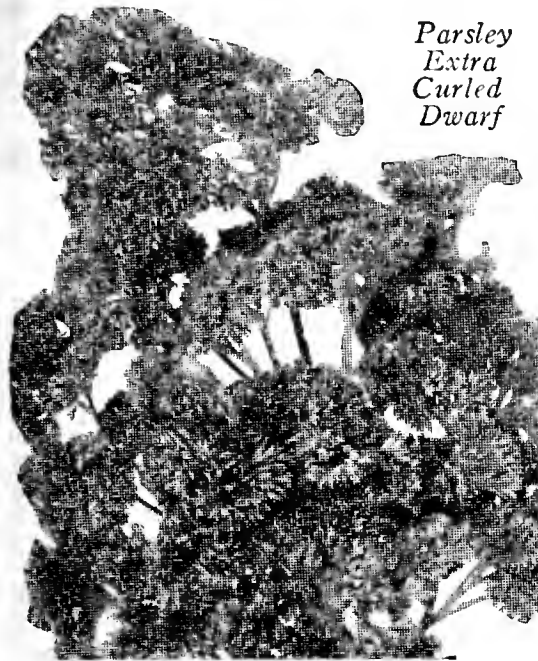

537 Dwarf White Heart Ⓞ We believe this is the most satisfactory of the Cos Lettuce varieties. It is crisp, has a refreshing, snappy flavor, and does not need tying up in order to blanch the heart. Compact, strictly erect plants 10 in. tall, containing a surprising quantity of brittle juicy leaves of a most appetizing piquant flavor. It is highly recommended for the home garden and high-class markets. Pkt. 10¢; oz. 20¢; 4 ozs. 60¢; ½ lb. 85¢; 1 lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60.

539 Paris White Cos Also known as Trianon or Paris Self-Folding. For best results this variety should be tied with string or raffia to blanch the heart. Pkt. 5¢; oz. 20¢; 4 ozs. 50¢; ½ lb. 75¢; 1 lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50.

Muskmelons—Cantaloupes

*Burpee's
Netted Gem*

544 Burpee's Netted Gem © The Most Popular of all Green-fleshed Melons

(E) The variety grown at Rocky Ford, Colorado, under the name of Rocky Ford is the Netted Gem, which Burpee had the distinction of originating and introducing in 1881. A pure Rocky Ford Cantaloupe, when ripe, has a silver-colored netting which is lace-like in appearance. The skin is green, turning to a peculiar gray color when the melons are fit for shipping. The flesh is green and so sweet and luscious that it may be eaten close to the rind. Due to the small seed cavity, the fruits weigh about 1½ lbs. each. They are very firm and solid. Pkt. 10¢; oz. 15¢; 4 ozs. 40¢; ½ lb. 60¢; 1 lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00.

557 Honey Ball (L) This is a Texas melon which will ripen considerably farther north. It requires a growing season of about 100 days and produces perfectly round fruits 6½ in. in diameter. They are covered with netting. The flesh is light green, very sweet, combining the flavor of the Cantaloupe with Honey Dew. Pkt. 10¢; oz. 20¢; 4 ozs. 50¢; ½ lb. 80¢; 1 lb. \$1.35; 2 lbs. \$2.50; 5 lbs. \$5.95; 10 lbs. \$10.80.

The most suitable soil for melons is a rich warm sandy loam. Sow the seed after the soil has warmed up and the weather is quite settled—about the middle of May in the vicinity of Philadelphia. Place 6 to 8 seeds in a circle in slightly raised hills spaced 4 to 6 ft. apart, and cover the seed with one inch of fine soil. The early (E) varieties mature in 60 to 70 days. The midseason (M) or main crop varieties require 75 to 90 days, and the late (L) varieties require 95 to 115 days. One oz. of seed will plant 40 to 50 hills; 2 to 5 lbs. are required to plant one acre.

Burpee's Watermelons

Rich, rather sandy soils produce the finest crops of Watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The plants grow vigorously and for this reason the hills should be about 6 to 8 feet apart. Place 6 to 8 seeds edgewise, with the eyes downward, in a circle in each hill, and cover $\frac{1}{2}$ inch deep with fine soil. One ounce will plant 20 to 25 hills; 4 to 5 pounds per acre. The early (E) Watermelons mature in 85 to 100 days. The midseason (M) varieties require from 100 to 120 days. Late (L) varieties need 120 days or more.

608 Burpee's Kleckley Sweets Ⓞ

The rind is thin and for that reason the melons are not suited for shipping to distant markets, but for sale in local markets or for home use it is ideal on account of its luscious, sweet, rich pink flesh. Burpee's ONIONS

Onions are highly praised for their tonic qualities and their use is advocated by physicians everywhere. The soil best suited to grow a good crop of Onions is one that is reasonably fertile, well drained, and well prepared. Cover the seed lightly and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the Onions are harvested. One oz. of seed will give 200 ft. of drill; 4 to 5 lbs. are required for one acre. Onions require from 100 to 120 days to come to maturity.

BURPEE'S TOMATOES

*Burpee's
Sunnybrook
Earliana*

1097 Burpee's Sunnybrook Earliana ☉

An extra-early red Tomato with fine, smooth, scarlet-red skin. Our special Sunnybrook strain matures about five days earlier than other Earliana strains. The compact vines carry an enormous crop of beautiful scarlet-red fruits. The entire crop can be gathered usually in about three weeks from the time the first fruit ripens. It is a most productive variety, splendid for market and for the home garden. The fruits are very solid. They are produced mostly in the center of the plant. Fleshy, juicy, and of excellent flavor. Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.20; ½ lb. \$2.20; lb. \$4.00; 2 lbs. \$7.45; 5 lbs. \$18.00.

What is more attractive either as a salad or for garnishing than luscious juicy Tomatoes? They may be cooked in innumerable ways—by themselves or combined with other vegetables or meats. Tomatoes are exceedingly wholesome, rich in vitamins, and valuable as an appetizing dish in a great variety of forms. Start the seed indoors during February or March, and set out after all danger of frost has passed. Tomatoes do best in a rich, well-manured soil. For a continuous supply include early, midseason, and late varieties in your planting. The early varieties mature in 100 to 125 days, the midseason or second-early varieties in 125 to 140 days, the late or main-crop varieties in 140 days.

Early Varieties

1086 Penn State Earliana

This has been selected for extra-early maturity, large size, even shape, and smoothness of skin by the Pennsylvania State College of Agriculture. The skin is a beautiful rich scarlet color. The flesh is mild and deliciously sub-acid. It is second only to Sunnybrook Earliana and, like all varieties belonging to this type, does best on warm sandy soil. Our seed has been produced from original stock. Pkt. 15¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.20; ½ lb. \$2.20; lb. \$4.00; 2 lbs. \$7.45; 5 lbs. \$18.00.

1100 Spark's Earliana

This is the original Earliana Tomato which has proved so immensely valuable for growing on warm sandy soils. It has long been a great favorite with growers who have such conditions, and though excelled by Burpee's Sunnybrook Earliana and Penn State Earliana, there are still many growers who choose the original Spark's Earliana on account of earliness, productiveness, good shape, and rich color. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

1107 June Pink

An attractive large Tomato, maturing early and having bright deep pink skin and rich pinkish red flesh. It is the best early pink Tomato in existence. The meat is solid, of fine texture, and has a delightful sub-acid flavor. The shape of the fruits is somewhat flattened and also shows slight ridges. The vines set fruits abundantly. It is quite a favorite with many home gardeners. Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.20; ½ lb. \$2.20; lb. \$4.00; 2 lbs. \$7.45; 5 lbs. \$18.00.

1125 Break O'Day

A Tomato outstanding for its early maturity and productiveness. The fruits are almost round and have a bright orange-scarlet skin. The vine growth is moderate. The fruits are solid and heavy, with small seed-cavities. It was originated by the Department of Agriculture from a cross made between Marglobe and Marvana and promises to be a leading early variety. Pkt. 15¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.15; ½ lb. \$2.05; lb. \$3.75; 2 lbs. \$6.95; 5 lbs. \$16.85.

Second-Early Tomatoes

Chalk's Early Jewel

1101 Chalk's Early Jewel

The largest, smoothest, and finest flavored, second-early, bright red Tomato for home-garden planting and for market. The fruits are nearly round and slightly flattened. They are very deep, solid, and meaty, with only a few quite small seed-cells. Without question, it is the best early garden Tomato. Through careful selections made year after year our strain has become extremely uniform in every way. The greatest attention has been paid to productiveness. The color of the skin is an attractive rich crimson-scarlet and the flesh is a luscious deep scarlet-red. Planted extensively for canning in northern sections which require quick-maturing varieties. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

1068 Gulf State Market

A main-crop, pink-fruited Tomato. Globe-shaped, medium sized, smooth, and thick skinned. Fruits set in clusters of 5 to 7. The vine makes a rather open growth, allowing the sun to ripen the fruits evenly. Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.15; ½ lb. \$2.05; lb. \$3.75; 2 lbs. \$6.95; 5 lbs. \$16.85.

1117 Burpee's Self-Pruning

The limited branching habit makes it possible for the plant to throw all its strength into fruit production and consequently Burpee's Self-Pruning is an exceptionally heavy cropper. The Tomatoes are perfectly smooth and very solid. They are of handy size, with an even-colored, glossy, bright pinkish red skin. The flesh is juicy and of delightful sub-acid flavor. Pkt. 15¢; ½ oz. 25¢; oz. 45¢; 4 ozs. \$1.40; ½ lb. \$2.60; lb. \$4.75; 2 lbs. \$8.85; 5 lbs. \$21.35.

1120 Bonny Best

A selection from Chalk's Jewel made in Montgomery County, Pa. The fruits are of medium size, usually weighing from 4 to 6 ozs. each. They are borne in clusters, each containing 3 to 5 fruits. Their shape is globular, somewhat flattened and the skin is very smooth. The color of the fruits is a bright scarlet-red from stem to blossom-end. Though somewhat smaller than Chalk's Jewel, the fruits will mature about a week earlier. An ideal variety for the home garden on account of its prolificness. Often forced in the greenhouse during the winter months. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

This Burpee introduction is an excellent large choice variety of remarkable solidity, attractive appearance, and highest quality. The fruits measure 4 in. in diameter and are 2½ in. thick. They mature just before the main-crop varieties. The smooth skin is a beautiful deep purple-red of even coloring from stem to blossom-end. The fruits are solid and of finest quality. Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. \$1.20; ½ lb. \$2.20; lb. \$4.00; 2 lbs. \$7.45; 5 lbs. \$18.00.

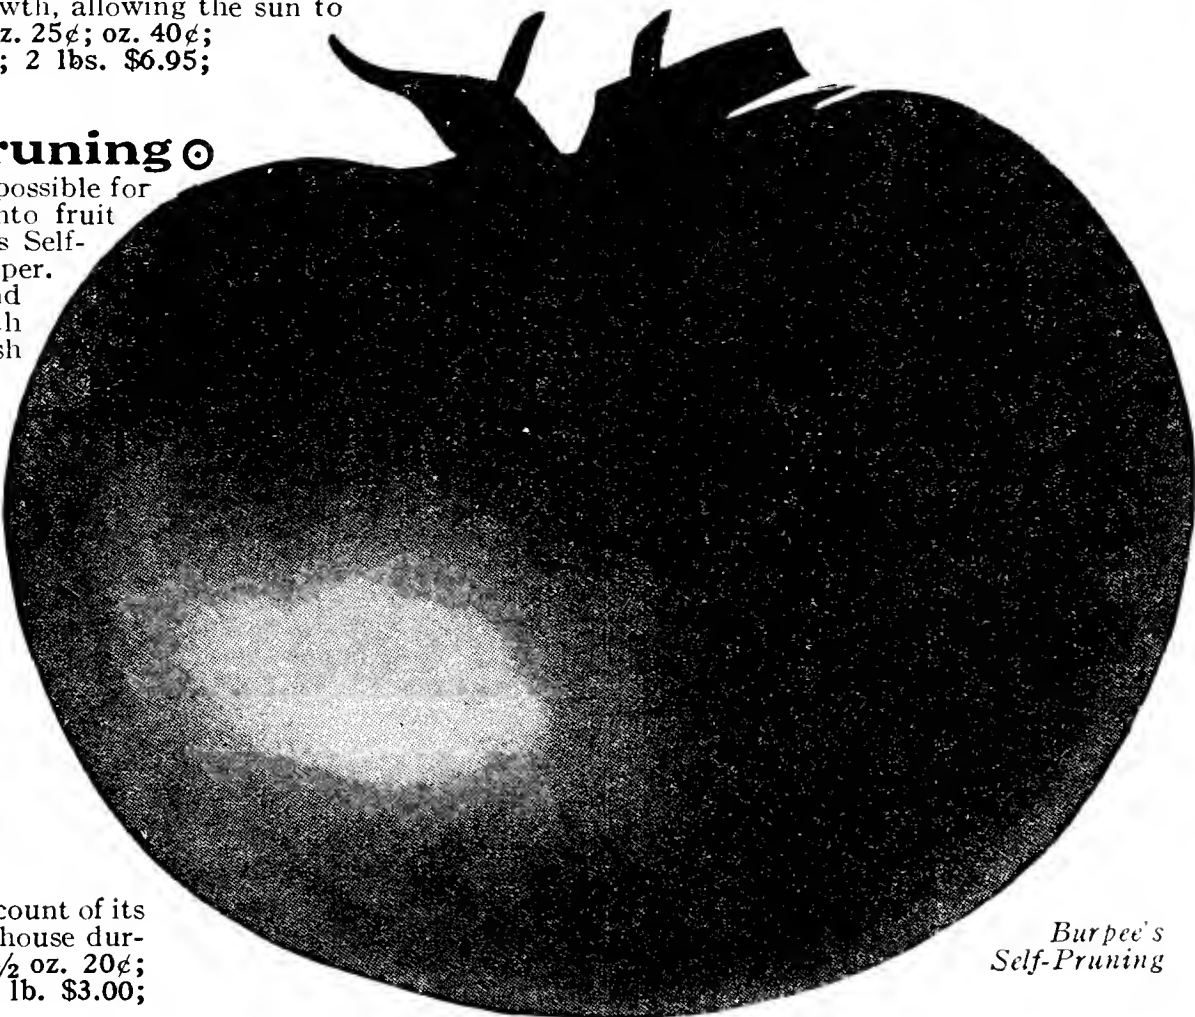

1087 John Baer

This is an attractive second-early Tomato producing an excellent crop of rich scarlet-red fruits. It is a selection from Chalk's Jewel and consequently there is a great resemblance to it in size, form, and color. It has proved to be of particular value for canning in northern sections where an early, solid, heavy fruiting variety is needed. The fruits are thick through and slightly flattened at the top. They are smooth, firm, and of medium-large size. We have a particularly fine stock of this excellent Tomato which we can highly recommend to market growers and home gardeners located in sections where the second-early varieties take the place of the main-crop tomatoes on account of the short growing season. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

1089 Marglobe®

No other Tomato ever introduced has been acclaimed as quickly as this remarkable variety which was originated with the Department of Agriculture in Washington. It is an all-purpose Tomato in every way, embodying all the good qualities looked for by the home gardener, the market grower, and the canner. It is particularly valuable for shipping and has proved to be decidedly disease-resistant, particularly against Fusarium Wilt and Nail-head Rust. The plants are vigorous and very productive, bearing a wonderful crop of uniformly globe-shaped, deep scarlet, large fruits. Young fruits have a tendency to be of a somewhat oval shape. The skin is smooth and evenly colored from stem to blossom-end. The interior of the fruits is solid, meaty, and juicy. The flavor of the bright red flesh is delicious. Pkt. 10¢; 1/2 oz. 20¢; oz. 35¢; 4 ozs. \$1.00; 1/2 lb. \$1.65; lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

Marglobe

1074 Stone This is one of the old favorite late or main-crop Tomatoes known for its productive-ness. The fruits are large, smooth, and have a deep scarlet skin. It is a standard variety with truckers and canners who know that they can depend upon it for a large crop of attractive and heavy fruits. Pkt. 5¢; 1/2 oz. 20¢; oz. 35¢; 4 ozs. 95¢; 1/2 lb. \$1.50; lb. \$2.75; 2 lbs. \$5.10; 5 lbs. \$12.35.

1091 Oxheart—New!

A newer variety which positively is the largest Tomato ever introduced. The skin is purplish scarlet. It is smooth and evenly colored. The individual Tomatoes will weigh as much as a pound and a half each. The oxheart shape of the fruits is most distinct. They are extremely solid and have few seed-cells, which accounts for their enormous weight. If you want to beat your neighbors by growing the largest smooth Tomatoes, try Oxheart this year. It is a valuable variety which combines a rich luscious sub-acid flavor with a size that is most unusual. Pkt. 15¢; 1/2 oz. 45¢; oz. 75¢; 4 ozs. \$2.25; 1/2 lb. \$4.10; lb. \$7.50; 2 lbs. \$13.95; 5 lbs. \$33.75.

1093 Dwarf Stone A very choice Tomato of dwarf habit, making a distinct tree-like growth which requires no training. Large smooth fruits of a bright scarlet-red color. The fruits average 4 in. in diameter and are about 3 1/2 in. thick. They are juicy, fleshy, and contain comparatively few seeds. A favorite with home gardeners who want a main-crop variety of compact growth. As the plants do not vine they can be planted closely together with a corresponding increase in yield. Pkt. 10¢; 1/2 oz. 25¢; oz. 45¢; 4 ozs. \$1.35; 1/2 lb. \$2.45; lb. \$4.50; 2 lbs. \$8.35; 5 lbs. \$20.25.

This is the finest and best of all dwarf Tomatoes, producing fruits which will weigh 10 to 20 ozs. each. The fruits are very attractive. They are smooth, somewhat flattened, and have a rich purple-crimson skin. Burpee's Dwarf Giant is the most meaty of all Tomatoes, with flesh free from any hard fiber or core. The meat is fine grained, juicy, and solid enough to stand shipping well. It has a most delicious and rich taste. The seed cavities are extremely small and it is, therefore, a shy seeder. Highly valued by home gardeners and market growers who find it a great advantage to grow a variety of compact habit which can be planted closely. 1114 True Giant Ponderosa

An old and well-established Tomato which enjoys great popularity with gardeners who prefer fruits with purplish pink skin such as this variety has. The Tomatoes grow to extremely large size and are full of luscious juicy flesh. The seed cavities are unusually small, which accounts for the astonishing weight of the fruits. It is not unusual for the Tomatoes to weigh 12 ozs. and more, though the average runs around 9 ozs. They are deep, somewhat flattened, and have a most agreeable mild flavor. People who do not care for the acid flavor of the deep red Tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor and a good deep pink color.

BURPEE'S TABLE TURNIPS

Turnips develop best during cool weather. In the vicinity of Philadelphia a fine summer crop can be grown from seed sown early in the spring. Most Turnips, however, are sown for a fall crop any time from the middle of July until about August 20. Sow thinly in rows not less than 18 in. apart and cover with $\frac{1}{2}$ in. of fine soil. Turnip seed often is broadcasted between the rows of corn or in the cultivated orchard. Early varieties are sown as a catch crop after early Potatoes. One oz. will sow 400 ft. of drill. 1 to 2 lbs. of seed are needed per acre. For broadcasting, 4 to 5 lbs. are needed for the same area. The early (E) varieties require 45 to 55 days and the late (L) varieties 60 to 75 days to reach maturity.

BURPEE'S *FAMOUS*

You can always count on Burpee's Zinnias. They are easy to grow and will succeed almost anywhere. They flower profusely from midsummer until late autumn and offer a wonderful variety of forms that range from the giant Dahlia-Flowered type to the dainty Lilliputs, and that meet every garden need for beds, borders, and cut-flowers. The taller types, with their luxuriant foliage, are excellent as a background for lower growing Zinnias or other annuals. And for colors, the modern Zinnias are a revelation. Not only do we have the yellows, reds, purples, and whites, but also various shades of rose, salmon, lavender, gold, and many more.

For the finest double flowers, plant in a sunny location in good soil, and water freely. Early blooms can be had by sowing the seed indoors about six weeks before outdoor planting time. Regular sowings should be made outdoors as soon as the soil is dry enough to be worked and all danger of frost has passed. Thin out or transplant, allowing 18 to 24 in. between the plants.

THE BEST PETUNIAS THAT GROW

A Crimson Specimen of Giant Fluffy Ruffles. One of the Finest Petunias Ever Grown

Petunias have about every quality that could endear them to the gardener's heart. They require remarkably little care and grow happily in any good soil and a sunny position. They are one of the most profuse bloomers among the annuals, producing an amazing blanket of delicate, colorful flowers from early summer until frost. The form, size, and colors of the blossoms have been strikingly improved in recent years. Petunias have always been a Burpee specialty. Many years of careful breeding and selection enable us to offer you the best Petunias that grow.

Petunias of the Bedding and Balcony types are easily grown from seed sown outdoors as soon as the soil is warm. For extra-early blooming the seed can be started indoors in March or April. As the seed is very small it should be sown thinly on the surface of well-pulverized soil, pressing the seeds gently into the soil by using a small, smooth board, and cover very lightly with sand or fine soil. The seed of the Double and Giant-Flowered types is more expensive and, therefore, to avoid waste, it is best to start it indoors, setting out the plants about 12 inches apart when the soil has become thoroughly warm. Until thoroughly established the plants must be watered carefully whenever necessary.

2569 Giant Fluffy Ruffles, Prize Mixed

A marvelous giant Petunia second to none ever grown for size, colors, and distinct beauty of form. The blossoms are 4 in. and more across and are beautifully waved and fringed. They are borne in the greatest profusion on strong vigorous plants. The flowers show a marvelously beautiful combination of colors—pink, scarlet, crimson, lavender, yellow, white, purple, etc. Some are veined or feathered in the throat with the most delicate tints while others are striped, blotched, or veined in deep, rich, gorgeous hues. Produces an incomparable color display. Pkt. 35¢; 1/128 oz. 75¢; 1/64 oz. \$1.35.

Giant Double Fringed Petunias

These wonderful flowers are a miracle of plant breeding, and have been produced from hand-pollinated seed. A high percentage of the blooms will come fully double, the edges fringed, the petals fluted and crinkled—flowers of extraordinary beauty and size. We advise sowing indoors in a box of light, rich soil kept in a sunny window. Press the seed into the surface or cover very thinly. A pane of glass over the box will be useful in retaining moisture. Transplant outdoors when trees are in full leaf. Give preference to the slow-growing plants with crumpled foliage as these usually give the finest double flowers.

BURPEE'S SNAPDRAGONS

Snapdragons (botanical name, *Antirrhinum*) have always been universal garden favorites. They are fascinating flowers, with their interesting form and glowing colors. They are easy to grow and will bloom continuously until severe frost, making a wonderful display and supplying unlimited cut-flowers. Ordinary good garden soil will produce fine Snapdragons either in full sun or semi-shaded spots. Sow outdoors when danger of frost has passed, or indoors six weeks earlier. Cover thinly with fine soil and keep well watered. Transplant, or thin out to give at least 12 in. between plants. Cut the flower-spikes when in full bloom to encourage continuous flowering.

Tall Giant-Flowering Snapdragon

Tall Giant-Flowering Snapdragons *Antirrhinum Maximum*

This magnificent strain produces the tallest, largest-flowered Snapdragons. It is outstanding also in its habit of growth and superb colors. Grown outdoors the spikes attain a height of 3 to 4 ft., while in the greenhouse they reach 5 to 7 ft. Each plant will produce many spikes closely set with immense, beautifully formed flowers. The most wonderful colors are offered in this class.

1705 Apple Blossom Delicate apple-blossom-pink enlivened by a blotch of bright yellow on the upper lip. Very charming. Lasts well both in the garden and when used as a cut-flower.

1721 Canary Bird Canary-yellow. A very striking color and a great favorite. Large flowers on long stems.

1699 Carmine-rose Shining carmine-rose with a touch of golden yellow on the lip. One of the brightest.

1714 Crusader A most unusual color—bright reddish velvety maroon with a luminous cast of glowing rich crimson. You will surely be pleased with this fine flower.

1706 Fire Flame Bright fiery red with a suffusion of brilliant orange and a glow of deep scarlet. Particularly rich. Fine for cut-flowers.

1715 Fordhook Rose A beautiful combination of rose-pink and yellow blending into a lovely soft rose of great charm. Color lasts well without fading.

1713 Orchid A bright mauve-pink, the shade of a Cattleya Orchid, with a slightly deeper colored tube. The blooms are elegantly formed and very beautiful.

1702 Ruby Glowing deep ruby-red; the color is decidedly striking and pleasing because it has a brilliance that is unusual in this flower.

1716 Snowflake Soft creamy white. A great favorite for cutting. The spikes are heavy and well filled.

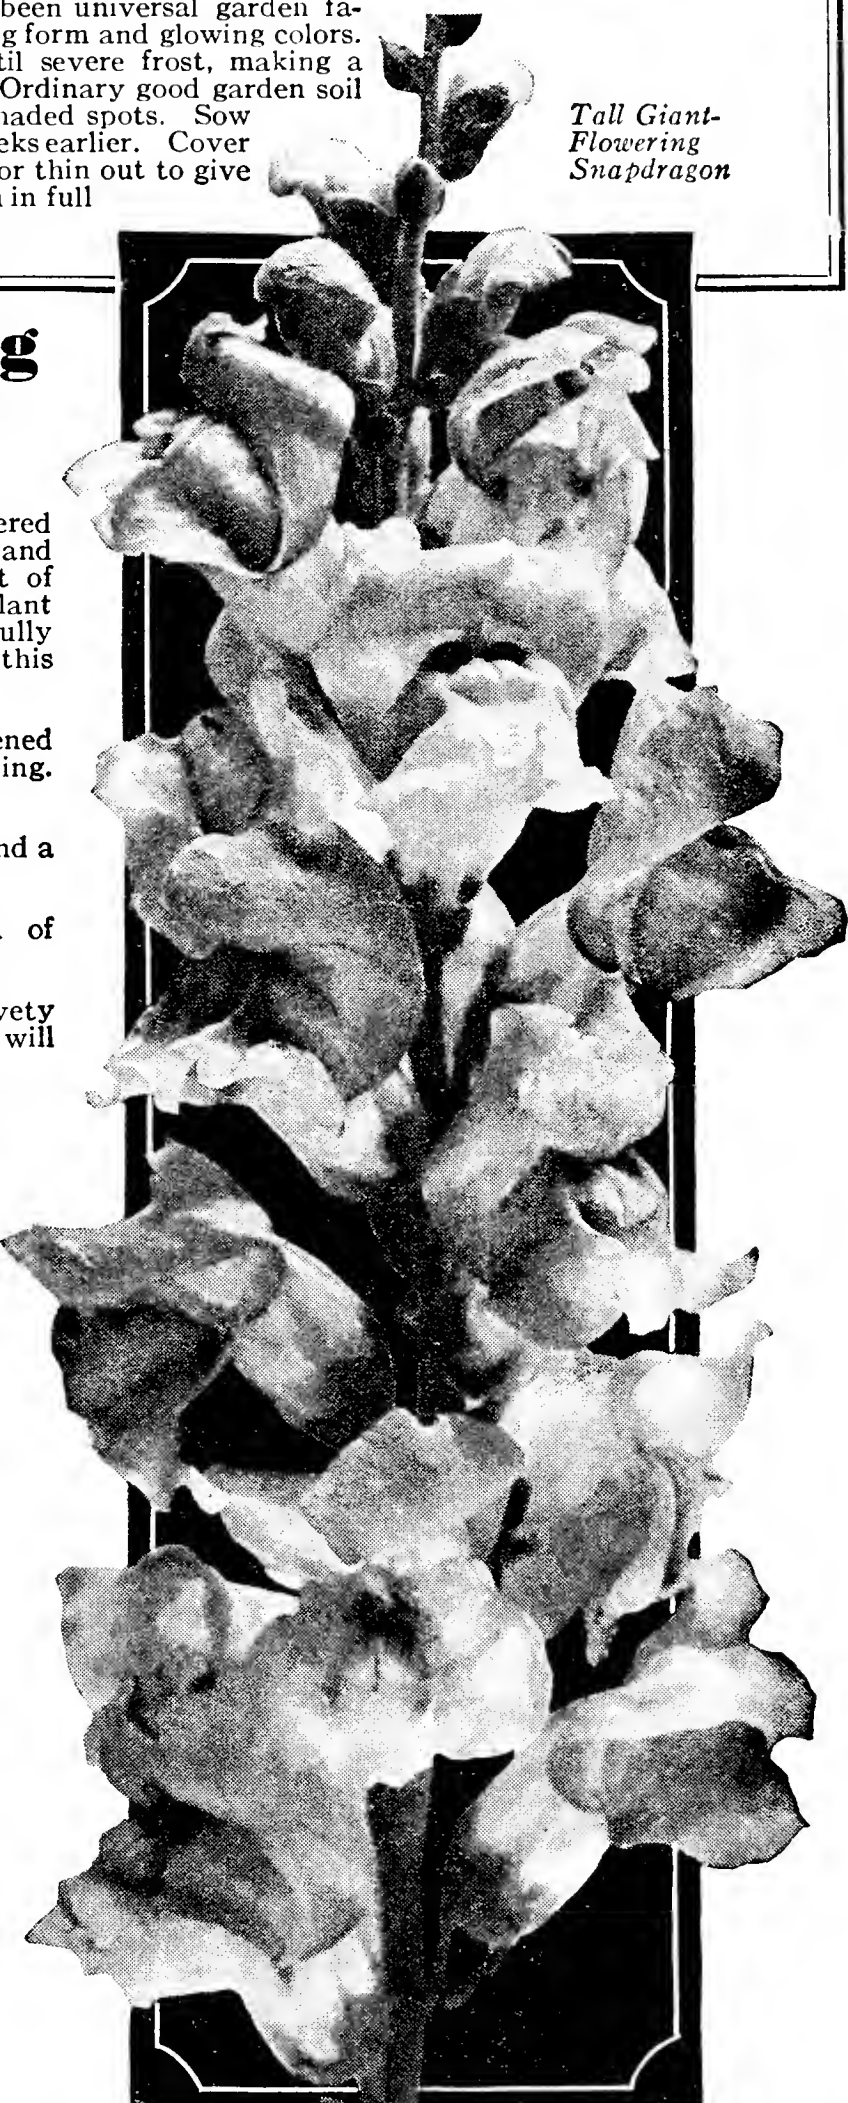

1701 Sunnybrook Rich and intense golden yellow shaded salmon and orange. This is a very popular shade and if you want a gay color, plant this gorgeous flower.

1717 Sunshine Brilliant deep yellow with a coppery sheen on the lip; tube is old rose. Forms splendid large and massive spikes.

1718 Wallflower Very appropriately named, with its blooms of a rich deep coppery crimson, the shade typical of Wallflowers. Your collection will not be complete without it.

Large-Flowered Snapdragons

Antirrhinum majus nanum grandiflorum

The bushy, compact plants are robust, about 15 in. tall in the garden; very free flowering, bearing long, dense spikes of blooms. The individual flowers are large, but not so large as the Tall Giant-Flowered class. Ideal for beds or borders; splendid for cut-flowers, each plant bearing many spikes. All varieties do well in the garden. Those marked (G) are especially suited for greenhouse culture during winter and early spring. In the greenhouse the spikes will reach a height of 3 to 5 ft.

BURPEE'S SNAPDRAGONS

New Majestic Snapdragons

Giant-Flowered Semi-Tall

This class is the very latest development in Snapdragons. It produces flowers practically as large as those of the Tall Giant-Flowered class, but is of semi-tall growth, with massive Hyacinth-like spikes reaching 18 to 24 in. The plants are of bushy habit, well rounded, suitable for beds and borders. They bloom profusely and are splendid for cut-flowers.

New This Year

1747 Dawn O'Day The flowers open a light rose-pink shade which quickly develops into a pure apricot slightly suffused gold toward the center.

1748 Primrose Princess A welcome new shade among the Majestic Snapdragons—a lovely primrose-yellow, deepening slightly toward the center. A very attractive shade which always pleases.

Either of the above varieties:

Burpee's Glorious Asters

When you have grown Asters once, you are likely to grow them always, for their delicate beauty of form and color is irresistible. You may have a continuous succession of flowers from early summer until frost by planting early, mid-season, and late-flowering varieties. The Asters offered here will come into bloom in about the following order: **EARLY**—Queen of the Market, Royal; **MIDSEASON**—King, Asternum, Crego, California Giant, California Sunshine, Single Giants; **LATE**—American Beauty, American Late Branching, Mammoth Peony-Flowered.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine and ample moisture. Plant in a different location each year. Asters bloom from three to five months after seed is sown, varying according to variety and climate. For early blooms sow seed indoors six weeks before outdoor planting time. When seedlings are two or three inches tall, transplant to pots and transfer to open ground when soil is warm. For later blooms, sow seed in the open as soon as soil is dry enough to work. Thin out seedlings, allowing 12 in. between upright growing varieties and 18 in. between branching varieties.

Queen of the Market Asters

The Earliest Flowering

The first of our Asters to come into bloom. The flowers can be had in late May or June by sowing the seed indoors in February or March. The plants grow 15 to 18 in. tall, and branch freely near the ground, giving long stems to the flowers. The flowers are nearly round, fully double, and measure 3 in. across.

Branching Aster

Giant Branching Asters

Also Known as American, Semple's and
Vick's Branching

From midseason until frost these Asters will produce a profusion of beautiful flowers. The blooms are immense, 3 1/2 to 4 in. across, and fully double. The petals are incurved and so closely massed as to form a very attractive, globular flower. The plants grow 2 to 3 ft. tall and branch freely. The stems, frequently 2 ft. long, make this class especially good for cutting. Nothing could be more dazzling than a blaze of color such as these giant flowers will give. Plant them liberally this year.

Burpee's Annual Larkspur

Larkspur is a favorite for its beauty in the garden and its effectiveness as a cut-flower. It is a quick-growing, easily raised, very free-flowering class, producing many graceful, erect spikes of gorgeous blooms during the whole summer. The varieties listed here are strictly annuals, distinct from the Delphinium or hardy Larkspur. Sow the seed any time in the spring—the earlier the better—where the plants are to remain, later thinning the seedlings to stand 8 to 12 in. apart. Larkspurs do well in almost any fairly dry soil.

Burpee's

Burpee Blend
of Giant Fancy
Pansies

2513 Burpee Blend of Giant Fancy Pansies

There are few flowers in which quality of the strain counts as much as in Pansies. We believe that the Burpee Blend of Giant Fancy Pansies deserves to be placed at the head of our list because it is a mixture that has been selected with the utmost care and discrimination. It contains the largest and most beautiful of all blotched Pansies. They are heavy, thick, well waved, and crinkled at the edges. Pkt. 35¢; 1/16 oz. 85¢; 1/8 oz. \$1.50; 1/4 oz. \$2.75; 1/2 oz. \$5.25; oz. \$10.00.

2454 Oregon Giants

This strain of Pansies, which originated in Oregon, distinguishes itself by being extra long stemmed. The flowers are somewhat more flattened than those of other Giant Pansies, but this characteristic adds considerably to the size of the blooms which, if well grown, measure 4 in. across. The originator exhibited such blooms at the Oregon Flower Show in 1928. A gracefully waved edge adds beauty to the otherwise flat blooms. Includes a wonderful range of colors. Pkt. 50¢; 1/16 oz. \$1.25; 1/8 oz. \$2.25; 1/4 oz. \$4.00.

2500 Mastodon Giants In this mixture of Giant Pansies we have a strain which shows a remarkable degree of heavy ruffling and crinkling. The flowers are very large and well shaped. They contrast well with the rich dark green foliage. The colors range from pure white to the deepest mahogany, including lovely lavender, rose, cerise, and light blue shades not found in any other strain. The plants are compact, bushy, and free blooming. Pkt. 35¢; 1/16 oz. \$1.00; 1/8 oz. \$1.75; 1/4 oz. \$3.25.

2463 Giant Ruffled Masterpiece This European type of Pansy enjoys the greatest popularity all over the world. It belongs to the crinkled and heavily ruffled type, and the blooms have so much substance that they have the appearance of double flowers. The color range is very beautiful and runs toward the rich and deeper shades. Pkt. 20¢; 1/16 oz. 40¢; 1/8 oz. 70¢; 1/4 oz. \$1.25; 1/2 oz. \$2.10; oz. \$3.75.

2461 Bugnot, Giant Blotched Large round flowers in many beautiful colors. In this type the blotches are not well defined on the edges but radiate into the margin of the flowers, giving a charming effect. Pkt. 15¢; 1/16 oz. 45¢; 1/8 oz. 80¢; 1/4 oz. \$1.35; 1/2 oz. \$2.35; oz. \$4.00.

2417 Orchid-Flowered In this strain the flowers are smaller than those of the other varieties described on this page, but what is lost in size is made up in color. It contains most unusual soft and delicate tints as found in some of our choicest Orchids. They have lovely ruffled edges. Pkt. 15¢; 1/16 oz. 45¢; 1/8 oz. 80¢; 1/4 oz. \$1.35; 1/2 oz. \$2.35; oz. \$4.00.

Burpee's New Giant Ruffled Sweet Peas

(SUMMER-FLOWERING)

The Newest and Most Beautiful of All

The new Giant Ruffled Sweet Peas are Burpee introductions, having been developed on the Burpee Floradale Farms in California after years of most careful breeding and selection. The main characteristic of this new type, acclaimed by experts as the greatest advancement in Sweet Peas, is the duplexness and extra frilliness of the flowers. This imparts a double appearance to the large wavy flowers, the frilliness extending even to the edges of the wings. Distinct, beautiful, and interesting.

Burpee's Ruffled White is the latest addition to the exquisite Giant Ruffled class

3417 Ruffled White

New this year, and a most welcome addition to the Giant Ruffled class. Pure white flowers of gigantic size are often borne five to the spray. They are beautifully ruffled with duplex and triplex standards. This is undoubtedly the outstanding new white Sweet Pea. Pkt. 30¢; ½ oz. \$1.35; oz. \$2.50.

3418 Lady Ruffles

One of the most exquisite of the Giant Ruffled Sweet Peas. Soft pink self on white ground, the warm glow of color runs well down to the base of the standard and wings. The blooms are large and beautifully frilled and ruffled. Lady Ruffles has received the high honor of winning the Gold Medal of the Scottish National Sweet Pea Society.

3612 Ruffled Carmine

Lovely carmine-rose, remarkably bright yet soft and pleasing. The large blooms are perfectly frilled and borne on long-stemmed sprays.

Burpee's Two Lovely New Giant Sweet Peas for 1934

(SUMMER-FLOWERING)

Each year Sweet Pea growers all over the world send seeds of any new varieties they may have, and which they consider really outstanding, to the National Sweet Pea Society of Great Britain for trial. Each lot is given a code number and all are grown under exactly the same weather and soil conditions. When in bloom, expert judges of Sweet Peas decide on the merits of each new variety.

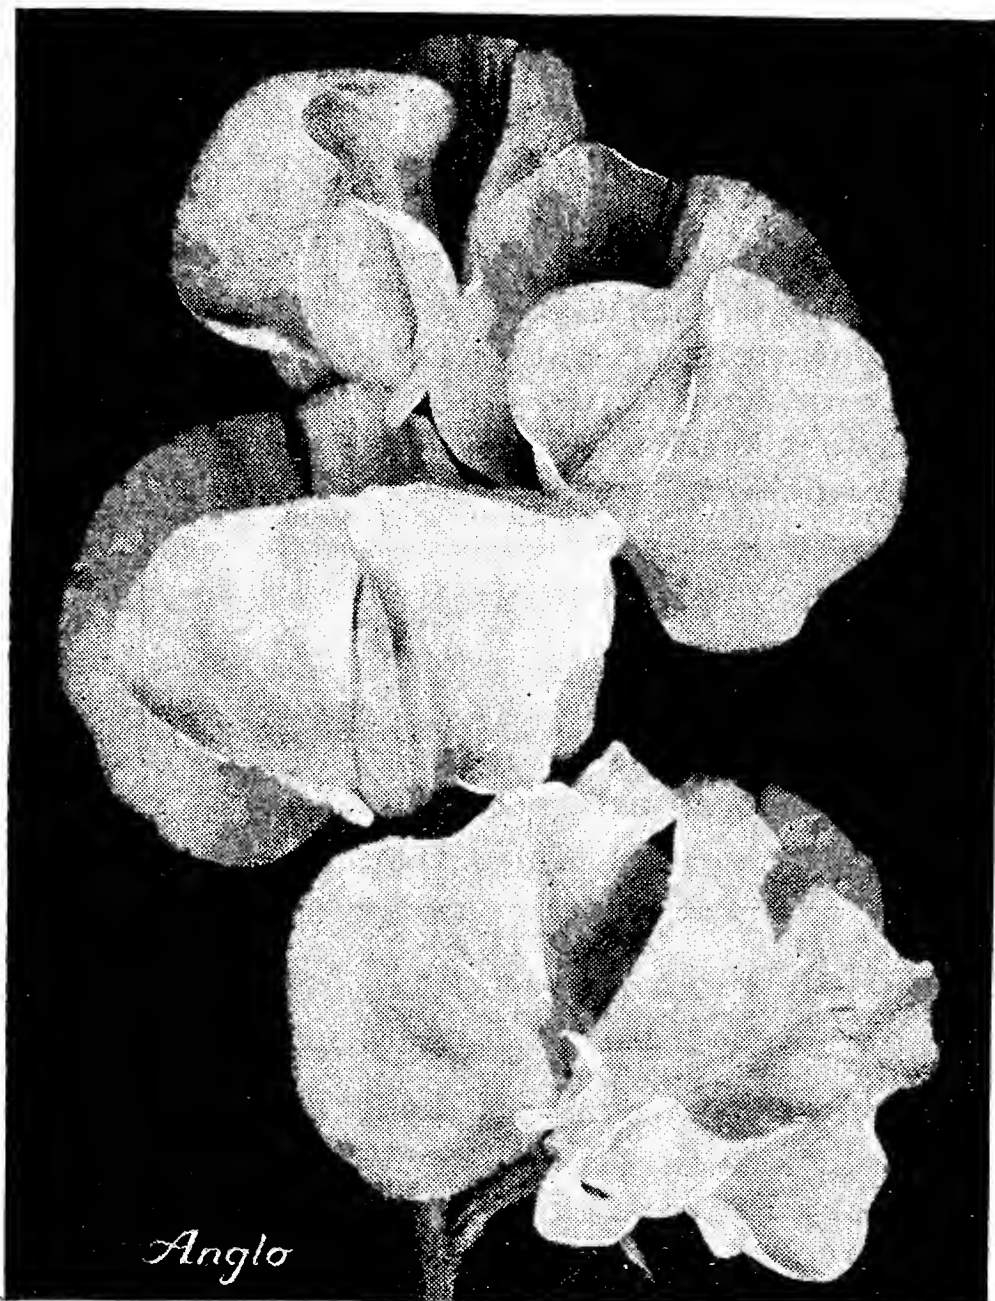

Last spring the judges selected six new varieties for Awards of Merit, and of the six awards given, Burpee was honored with having received three—one each for Anglo, Atlantic, and Pacific.

We are very fortunate in having harvested probably enough seed of Anglo and Atlantic to offer them to you now, but we will not have sufficient seed of Pacific until next season. Pacific is golden pink—a color never before seen in Sweet Peas—a variety you will surely want. Anglo and Atlantic are described below. Both are wonderful new varieties. Be sure to try them and the new Ruffled White described on the opposite page.

Many years have been spent by us in developing and perfecting Sweet Peas, constantly improving their forms, colors, and growing habits so that, today, Burpee's Sweet Peas are world famous and the best that grow.

The fact that Burpee Sweet Peas won three Awards of Merit at the National Sweet Pea Society of Great Britain trials and a gold medal for Lady Ruffles Sweet Pea at the Scottish National Sweet Pea Society trials is surely proof of their real worth. Many other gold and silver medals as well as Certificates of Merit have been awarded to Burpee's Sweet Peas at flower shows all over the world.

Anglo and Atlantic (Burpee's two new Prize Winners), the new Giant Ruffled class on opposite page, and all the other Sweet Peas listed on the following pages are of the summer-flowering type, recommended for general garden culture except in very warm countries.

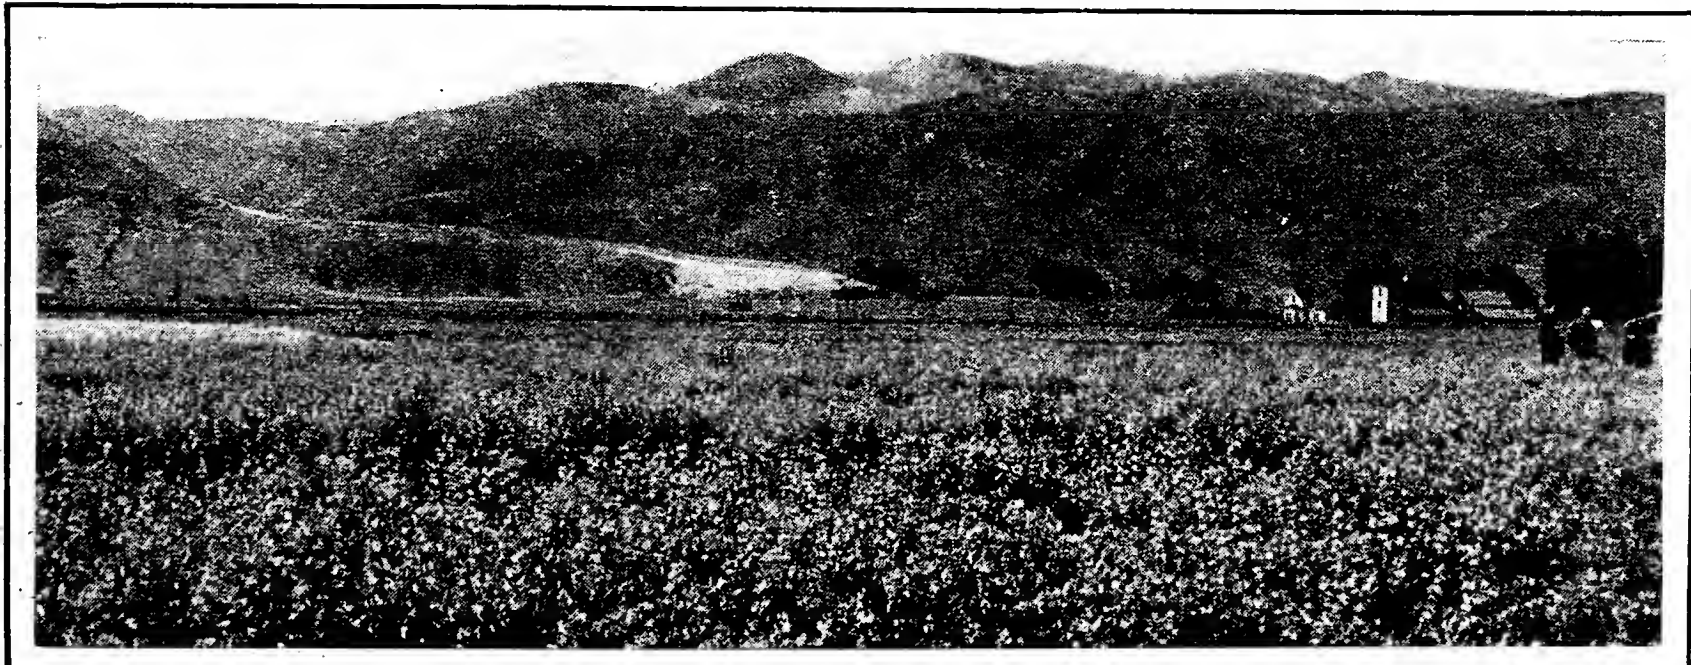

3611 Atlantic

There is a warm softness to this variety that is appealing. The Geranium-pink color is suffused throughout with amber. A new effect is given by the lace-like netting of cherry-bloom-pink that adds to the attractiveness of the flower. Entirely distinct and especially beautiful under artificial light. Pkt. 25¢; ½ oz. \$1.35; oz. \$2.50.

3609 Anglo

A pleasing new Sweet Pea with unique coloring effects. In the bud stage one thinks that at last the elusive yellow Sweet Pea has arrived. As the flower opens we find a somewhat subdued yellow or deep cream suffused with blush-pink, deeper at the edges and carried high up on the standard and wings. The reverse of the standard is pink extending down to the base of the petal. A true soft cream-pink of subtle and delicate coloring. The lovely large flowers are always duplexed and waved and are carried on long stems. Pkt. 25¢; ½ oz. \$1.35; oz. \$2.50.

One of Our Great Specialties

Burpee's Gold Medal Dahlias

The Dahlias of today, which you may order for your garden, far surpass what were considered even the best exhibition Dahlias just a few years ago. As a Dahlia admirer, be sure to plant Burpee's Gold Medal Dahlias this year, and see the difference. Whether you select the massive Decorative type or the small Pompon varieties which recently are winning so many admirers, you will be delighted. We list the popular favorites, including many outstanding varieties created and introduced by Burpee.

The American Dahlia Society has adopted a classification of all Dahlias, according to the formation of the flowers, and after each name we give a key showing the class to which the variety belongs. Thus: **F. D.** = **Formal Decorative**; **I. D.** = **Informal Decorative**; **C.** = **Cactus**; **S. C.** = **Semi-Cactus**; **Po** = **Pompon**.

GLADIOLUS

Massive Flower-Spikes in a Gorgeous Array of Colors

Burpee's famous improved Gladiolus are grown and admired wherever beautiful flowers are known. They make attractive displays in the garden, planted either in beds or in groups here and there in the perennial or annual border. They are ideal for house decoration. Cut them when the lowest flower shows color.

8368 Burpee's Fordhook Hybrids

This is a special Burpee strain of Gladiolus, representing a magnificent, colorful mixture of only large-flowered spikes in an array of colors that defies description. Quality Farm Seeds

Burpee makes no extra charge for bags

When planting a field, every farmer has in mind just one object—to obtain the best crop possible. Better quality, a little extra yield beyond the average crop—these mean extra dollars and cents at harvest time. The first requirement for a good crop is good seed. Experience proves it pays to use only seeds of known quality. Cheap seeds waste the time, the labor, and the fertilizer used in preparation for the crop, and no after-care in cultivation can make the crop what it might have been. Burpee's Seeds—the best that can be grown—are widely used by progressive farmers everywhere.

Root crops—one of the most important classes of farm products—should receive more attention. Their high food value makes them very desirable for stock feeding all the year round. They are easily stored throughout the winter. See the complete list on next page.
